Making Natural Knowledge Jan Golinski, 1998-05-13 In *Making Natural Knowledge* Constructivism and the History of Science Jan Golinski reviews recent writing on the history of science and shows how it has been dramatically reshaped by a new understanding of science itself In the last few years scientific knowledge has come to be seen as a product of human culture an approach that has challenged the tradition of the history of science as a story of steady and autonomous progress New topics have emerged in historical research including the identity of the scientist the importance of the laboratory the role of language and instruments and the connections with other realms of culture and society Golinski has written a sympathetic but critical survey of this exciting field of research at a level that can be appreciated by students or anyone else who wants an introduction to contemporary thinking in the development of the sciences
