New Trends in Microlocal Analysis

J.-M. Bony, M. Morimoto, 1997 Microlocal analysis began around 1970 when Mikio Sato along with coauthors Masaki Kashiwara and Takahiro Kawai wrote a decisive article on the structure of pseudodifferential equations thus laying the foundation of D modules and the singular spectrums of hyperfunctions. The key idea is the analysis of problems on the phase space i.e. the cotangent bundle of the base space. Microlocal analysis is an active area of mathematical research that has been applied to many fields such as real and complex analysis, representation theory, topology, number theory, and mathematical physics. This volume contains the presentations given at a seminar jointly organized by the Japan Society for the Promotion of Science and Centre National des Recherches Scientifiques entitled "New Trends in Microlocal Analysis". The book is divided into three parts: partial differential equations and mathematical analysis, mathematical physics, and algebraic analysis. D modules and sheaf theory. The large variety of new research that is covered will prove invaluable to students and researchers alike.

Advances in Microlocal Analysis H.G. Garnir, 2012-12-06 The 1985 Castelvecchio Pascoli NATO Advanced Study Institute is aimed to complete the trilogy with the two former institutes I organized: Boundary Value Problem for Evolution Partial Differential Operators Liege 1976 and Singularities in Boundary Value Problems Maratea 1980. It was indeed necessary to record the considerable progress realized in the field of the propagation of singularities of Schwartz distributions which led recently to the birth of a new branch of Mathematical Analysis called Microlocal Analysis. Most of this theory was mainly built to be applied to distribution solutions of linear partial differential problems. A large part of this institute still went in this direction. But on the other hand it was also time to explore the new trend to use microlocal analysis in non linear differential problems. I hope that the Castelvecchio NATO ASI reached its purposes with the help of the more famous authorities in the field. The meeting was held in Tuscany Italy at Castelvecchio Pascoli little village in the mountains north of Lucca on September 2-12 1985. It was hosted by 11 Ciocco an international vacation Center in a comfortable hotel located in magnificent mountain surroundings and provided with all conference and sport facilities.

New Trends in the Theory of Hyperbolic Equations Michael Reissig, 2005-07-19 This book presents several recent developments in the theory of hyperbolic equations. The carefully selected invited and peer-reviewed contributions deal with questions of low regularity, critical growth, ill-posedness, decay estimates for solutions of different non-linear hyperbolic models and introduce new approaches based on microlocal methods.

Harmonic, Wavelet and P-adic Analysis Nguyen Minh Chuong, 2007 The mutual influence between mathematics and science and technology is becoming more and more widespread with profound connections among them being discovered. In particular, important connections between harmonic analysis, wavelet analysis, and p-adic analysis have been found recently. This volume reports these findings and guides the reader towards the latest areas for further research. It is divided into two parts: harmonic, wavelet, and p-adic.

Hypoelliptic Estimates and Spectral Theory for Fokker-Planck

Operators and Witten Laplacians Francis Nier,Bernard Helffer,2005-01-17 There has recently been a renewal of interest in Fokker Planck operators motivated by problems in statistical physics in kinetic equations and differential geometry Compared to more standard problems in the spectral theory of partial differential operators those operators are not self adjoint and only hypoelliptic The aim of the analysis is to give as generally as possible an accurate qualitative and quantitative description of the exponential return to the thermodynamical equilibrium While exploring and improving recent results in this direction this volume proposes a review of known techniques on the hypoellipticity of polynomial of vector fields and its global counterpart the global Weyl H rmander pseudo differential calculus the spectral theory of non self adjoint operators the semi classical analysis of Schr dinger type operators the Witten complexes and the Morse inequalities

Microlocal analysis is a field of mathematics that was invented in the mid 20th century for the detailed investigation of problems from partial differential equations which incorporated and made rigorous many ideas that originated in physics Since then it has grown to a powerful machine which is used in global analysis spectral theory mathematical physics and other fields and its further development is a lively area of current mathematical research In this book extended abstracts of the conference Microlocal Methods in Mathematical Physics and Global Analysis which was held at the University of Tbingen from the 14th to the 18th of June 2011 are collected

members of the Department of Mathematics and Statistics and the Office of the Vice President Academic of York University

In spite of two SARS outbreaks in Toronto in 2003 the ISAAC Congress was held as scheduled and was well attended by

mathematicians from all over the world There were nine plenary lectures and seventeen special sessions representing most

major themes in analysis Among these were two plenary lectures and a special session on pseudo differential operators

organized by Ryuichi Ashino of Osaka Kyoiku University Paolo Boggiatto of Universite di Torino and M W Wong of York

University In the summer of 2003 M W Wong had the idea of putting together the lectures on pseudo differential operators in

a volume to be published in a series that advocates operator theory and its applications In early August of 2003 when Israel

Differential Operators in his series Operator Theory Advances and Applications he replied immediately endorsing the

proposal enthusiastically

Functional Analysis and Global Analysis Toshikazu Sunada,Polly Wee Sy,1997 It is a recent tendency to put emphasis on the applied side of mathematics The entirely new development in applied fields however has been done often in combination with ideas and methods in pure mathematics which are seemingly not related to practical problems Conversely many problems in pure mathematics stem from questions raised in other fields These Proceedings show the reader that this phenomenon is in particular prominent in pure and applied analysis Abstract theory in functional analysis and global analysis turns out to be useful to solve problems in many branches of natural sciences for example biology physics and chemistry The International Conference on Functional Analysis and Global Analysis held 20 26 October 1996 at the University of the Philippines Diliman Campus brought together mathematicians in the Southeast and East Asia to foster better cooperation for scientific development The conference addressed the problems and applications to mathematical theories and models in Functional and Global analysis the topics being covered by over 20 invited international speakers from prestigious academic institutions around the globe and presented in this book The reader will discover a harmony between pure analysis and applied analysis in the excellent articles contained here which cover topics in evolution equations mathematical methods for phase transitions quantum ergodicity wavelet analysis and dynamical systems
