Progress in Hybrid RANS-LES Modelling Shia-Hui

Peng, Piotr Doerffer, Werner Haase, 2010-09-17 Hybrid modelling of turbulent flows combining RANS and LES techniques has received increasing attention over the past decade to fill the gap between U RANS and LES computations in aerodynamic applications at industrially relevant Reynolds numbers With the advantage of hybrid RANS LES modelling approaches being considerably more computationally efficient than full LES and more accurate than U RANS particularly for unsteady aerodynamic flows has motivated numerous research and development activities These activities have been increasingly stimulated by the provision of modern computing facilities The present book contains the contributions presented at the Third Symposium on Hybrid RANS LES Methods held in Gdansk Poland 10 12 June 2009 To a certain extent this conference was a continuation of the first symposium taking place in Stockholm Sweden 2005 and the second in Corfu Greece 2007 Motivated by the extensive interest in the research community the papers presented at the Corfu symposium were published by Springer in the book entitled *Advances in Hybrid RANS LES Modelling in Notes on Numerical Fluid Mechanics and Multidisciplinary Design Vol 97* At the Gdansk symposium along with four invited keynotes given respectively by S Fu U Michel M Sillen and P Spalart another 28 papers were presented on the following topics Unsteady RANS LES Improved DES Methods Hybrid RANS LES Methods DES versus URANS and other Hybrid Methods Modelli related Numerical Issues and Industrial Applications After the symposium all full papers have been further reviewed and revised for publication in the present book *New Results in Numerical and Experimental Fluid Mechanics VIII* ,2012-12-28 **TRANSAERO** Burkhard Schulte-Werning, 2002-04-24 This volume entitled contains the results obtained by a symposium which took place in Paris France on May 04 05 1999 hosted by the International Union of Railways UIC This symposium was organised within the framework of the Brite Euram project TRANSAERO The TRANSAERO project bundles the expertise of three railway companies and eight universities and research institutions in Europe to improve the physical understanding of the time-dependent effects of side wind forces train passing and pressure waves in tunnels The goal was to find efficient and economically satisfying solutions to these problems by simultaneously regarding high speed rolling stock infrastructure and operating conditions *New Results in Numerical and Experimental Fluid Mechanics VIII* Andreas Dillmann, Gerd Heller, Hans-Peter Kreplin, Wolfgang Nitsche, Inken Peltzer, 2012-12-27 This volume contains the contributions to the 17th Symposium of STAB German Aerospace Aerodynamics Association STAB includes German scientists and engineers from universities research establishments and industry doing research and project work in numerical and experimental fluid mechanics and aerodynamics mainly for aerospace but also for other applications Many of the contributions collected in this book present results from national and European Community sponsored projects This volume gives a broad overview of the ongoing work in this field in Germany and spans a wide range of topics airplane aerodynamics multidisciplinary optimization and new configurations hypersonic flows and aerothermodynamics flow control drag reduction and laminar flow control rotorcraft aerodynamics aeroelasticity and structural dynamics numerical simulation experimental simulation and test

Active Flow Control II Rudibert King, 2010-04-06 The interest in the field of active flow control AFC is steadily increasing In cent years the number of conferences and special sessions devoted to AFC org ized by various institutions around the world continuously rises New advanced courses for AFC are offered by the American Institute of Aeronautics and Ast nautics AIAA the European Research Community on Flow Turbulence and Combustion ERCOFTAC the International Centre for Mechanical Sciences CISM the von Karman Institute for Fluid Dynamics VKI to name just a few New books on AFC are published by prominent colleagues of our field and even a new periodical the International Journal of Flow Control appeared Despite these many activities in AFC it was felt that a follow up of the highly successful ACTIVE FLOW CONTROL Conference held in Berlin in 2006 was appropriate As in 2006 ACTIVE FLOW CONTROL II consisted only of invited lectures To sti late multidisciplinary discussions between experimental theoretical and numerical fluid dynamics aerodynamics turbomachinery mathematics control engineering metrology and computer science parallel sessions were excluded Unfortunately not all of the presented papers made it into this volume As the preparation and printing of a book takes time and as this volume should be available at the conf ence the Local Organizing Committee had to set up a very ambitious time sch ule which could not be met by all contributors

Turbulence and Interactions Michel Deville, Thien-Hiep Lê, Pierre Sagaut, 2009-03-20 Contains seven keynote lectures of the TI 2006 conference that was held in Porquerolles May 29 June 2 2006 This book offers a view on theory experiments and numerical simulations in the field of turbulence
