**Implementing IBM Real-time Compression on the IBM XIV Storage System** Guenter Rebmann, Albert Verhoeff, Megan Gilge, IBM Redbooks, 2017-02-22  
IBM Real-time Compression™ is fully integrated in the IBM XIV Storage System Gen3 with software version 11.6. Real-time Compression provides the possibility to store 2-5 times more data per XIV system without additional hardware. This technology also expands the storage replication related bandwidth and can significantly decrease the total cost of ownership (TCO). Using compression for replication and for volume migration with IBM Hyper Scale Mobility is faster and requires less bandwidth for the interlink connections between the IBM XIV storage systems because the data that is transferred through these links is already compressed. IBM Real-time Compression uses patented IBM Random Access Compression Engine (RACE) technology, achieving field proven compression ratios and performance with compressible data. This IBM Redpaper™ publication helps administrators understand and implement IBM Real-time Compression on the IBM XIV Gen3 storage system.

Alongside their story is the story of Elsie, their servant and her love for Joe. The characters bring about their own downfall or survival; the book is a mixture of melancholy and hopefulness. There is also an interesting portrait of an old fashioned family doctor who is the deus ex machina. Although the book is set just after the end of the First World War, the characters' attitudes and beliefs hark back to the Victorian era rather than being influenced by any new ideas.    *Host Bibliographic Record for Boundwith Item Barcode 30112114734418 and Others*, 1909    **The American-Scandinavian Review** Henry Goddard Leach, 1913 Vol 14 no 5 May 1926 is a special issue devoted to John Ericsson
