Fernández-Berrocal, Purificación Checa, 2016-09-07 Nowadays not only psychologists are interested in the study of Emotional Intelligence EI Teachers educators managers employers and people in general pay attention to EI For example teachers would like to know how EI could affect student's academic results and managers are concerned about how EI influences their employees performance The concept of EI has been widely used in recent years to the extent that people start to applying it in daily life EI is broadly defined as the capacity to process and use emotional information More specifically according to Mayer and Salovey EI is the ability to 1 accurate perception appraise and expression of emotion 2 access and or generation of feelings when they facilitate thought 3 understand emotions and emotional knowledge and 4 regulate emotions to promote emotional and intellectual growth Mayer and Salovey 1997 p 10 When new information arises into one specific area of knowledge the work of the scientists is to investigate the relation between this new information and other established concepts In this sense EI could be considered as a new framework to explain human behaviour As a young concept in Psychology EI could be used to elucidate the performance in the activities of everyday life Over the past two decades studies of EI have tried to delimitate how EI is linked to other competences A vast number of studies have reported a relation between EI and a large list of competences such as academic and work success life satisfaction attendee to emotions assertiveness emotional expression emotional based decision making impulsive control stress management among others Moreover recent researches have shown that EI plays an important role in the prediction of behaviour besides personality

and cognitive factors However it is not until quite recently that studies on EI have considered the importance of individual differences in EI and their interaction with cognitive abilities The general issue of this Research Topic was to expose the role of individual differences on EI in the development of a large number of competencies that support a more efficient performance in people's everyday life The present Research Topic provide an extensive review that may give light to the better understanding of how individual differences in EI affect human behaviour We have considered studies that analyse 1 how EI contributes to emotional cognitive and social process beyond the well known contribution of IQ and personality traits as well as the brain system that supports the EI 2 how EI contributes to relationships among emotions and health and well being 3 the roles of EI during early development and the evaluation in different populations 4 how implicit beliefs about emotions and EI influence emotional abilities
