Hepner,Erika Litvin Bloom,Sydney Newberry,Jessica L. Sousa,Karen Chan Osilla,Mariika Booth,Armenda Bialas,Carolyn M. Rutter,2022-05-10 This report presents results from a systematic review and meta analyses of research examining how mindfulness meditation affects 13 performance related outcomes of interest to the U S Army and broader military The authors supplemented the systematic review by examining how mindfulness meditation could support stress management and exploring characteristics of selected mindfulness programs

Mindfulness Meditation for Chronic Pain Margaret Maglione,2016 RAND researchers conducted a systematic review that synthesized evidence from randomized controlled trials of mindfulness meditation interventions used adjunctively or as monotherapy to provide estimates of their efficacy and safety in alleviating chronic pain in adults Outcomes of interest included changes in pain symptomatology use of analgesics functional status health related quality of life functional impairment disability measures and adverse events Meta analyses for efficacy outcomes were conducted using the Hartung Knapp Sidik Jonkman method for random effects models Quality of evidence was assessed using the Grades of Recommendation Assessment Development and Evaluation or GRADE approach In total 28 studies met inclusion criteria Mindfulness meditation was associated with a small effect of improved pain symptoms compared with control groups in a meta analysis of 24 randomized controlled trials However there was evidence of substantial heterogeneity among studies resulting in a low quality of evidence assessment for this outcome We were unable to determine which patient subgroups or intervention characteristics were associated with greater efficacy Mindfulness meditation statistically significantly improved depression and health related quality of life Adverse events were rare and not serious but the vast majority of studies did not collect adverse event data The low quality of evidence prevents any strong conclusions about mindfulness meditation for

chronic pain Additional trials with adequate power greater efforts to prevent attrition monitoring of adherence to meditation practice active collection of adverse events and better reporting of methods are suggested Publisher s description

A Review of the Effects of Mindfulness Meditation on Chronic Pain in Older Adults Gregory H. Jacks,2023 Pain is a biopsychosocial phenomenon which draws from physiological responses as well as cultural and social context and mental states Pain is most frequently treated through surgical and pharmacological interventions which can be costly and time consuming especially when treating chronic pain Older adults suffer from chronic pain at a higher rate than the rest of the population and more accessible interventions are desperately needed to help manage the experience of chronic pain Mindfulness meditation is increasingly being utilized for management of pain due to evidence of its effectiveness cheaper cost and ability to be practiced outside of medical facilities Prior research studies looked at the effectiveness of using mindfulness meditation to manage chronic pain but a limited number have focused on older adults This systematic review was conducted to examine the benefits of mindful meditation in managing chronic pain in older adults Eight studies were included and narrative synthesis was used to demonstrate that while mindful meditation does not appear to reduce pain intensity it may help manage chronic pain in older adults by changing the relationship to pain which in turn may reduce functional impairment and negative emotions and improve quality of life Clinical applications are discussed

Guodong Zhang, Yang Cao, Zi Yan,2025-02-14 High intensity sports and physical exercise have been linked to various health benefits However when it comes to increasing longevity these activities may not be an ideal option for the general population Mind body exercise which combines physical exercise with mindfulness may be more effective in promoting and restoring health especially for those with chronic symptoms or poor health conditions Many mind body exercises such as Taichi Qigong Chan Chuang and Yoga have their roots in Eastern cultures They have gained popularity around the world and became a new fashion in the post COVID 19 era These exercises typically help practitioners shift their focus from the outside world past or future to the present moment through gentle body movements Mind body exercises emphasize the body s innate ability to heal itself By disconnecting from the noisy outside world the body is given the opportunity to heal This aligns with the classic belief in Chinese medicine that the body itself is the best medicine

regulation reperceiving and the Intention Attention Attitude IAA triaxiomatic model Subsequent chapters discuss mindfulness based interventions and mechanisms of change for stress and related clinical conditions including chronic pain traumatic stress anxiety and related disorders and clinical depression The final chapter reviews possible neural networks and brain mechanisms associated with mindfulness meditation practice As the research on stress reactivity and mindfulness based stress reduction continues to proliferate this book offers readers a single volume covering the most relevant information across this vast terrain Other available volumes offer in depth coverage of stress research with little mention of mindfulness and stress reduction Conversely many texts on the topic of mindfulness and mindfulness based interventions do not adequately cover the biopsychosocial processes of stress reactivity

Mindfulness Meditation in Speech-Language Pathology Intervention Jacqueline Z. Maiers, 2023 Meditation is a practice in which an individual intentionally allocates their attention in specific ways to elicit improvements in their mental emotional or physical state and functioning As described by Cahn and Polich 2006 many forms of meditation exist however the majority are characterized as mindfulness insight meditation concentration based meditation or a combination of the two mind body meditation These two types of meditation are primarily differentiated by their intended outcomes and the approach of perspective to achieve those

outcomes Although both involve focused attention mindfulness meditation is done with a nonjudgmental openness toward all thoughts and emotions that may occur whereas concentration based meditation involves directing all attention towards one's perception or action during exposure to sensory stimuli or activity Cahn and Polich 2006
