**Object-Oriented Metamethods** B. Henderson-Sellers,A. Bulthuis,2012-12-06 Object technology is maturing rapidly One sign of that is the formality of the discussions that occur all around the world at conferences in newsgroups in industry developer groups and in academe One face of formality is metamodelling seeking the model of the model that gives the rules by which the model itself is constructed In OT terms it means seeking the underpinning rules in a methodology in which for instance it is suggested we depict an aggregate structure using one particular notation The questions that need answering are the semantics of that relation ship and the constraints i e when and how it is allowable and what values constructs are not admissible In the past these rules and constraints have been merely written down in textbooks and methodology manuals Unfortunately despite the plethora of au thoring and word processing programs available this leads to in consistencies when cross checks are not assiduously undertaken There are few explicit signs of metamodels in the published OOAD texts In this book we describe how we found those metamodels implicitly written into the methods We formalized each of these in exactly the same way using the same metalevel concepts and metarelationships This book describes the fruits of those metamodelling labours which we undertook as objectively as possible in 1995 In 1996 we then worked with the individual methodologists to ensure that we had not misinterpreted any par ticular metamodels [Handbook on Architectures of Information Systems](#) Peter Bernus,2006 An authoritative source about methods languages methodologies and supporting tools for constructing information systems that also provides examples for references models Its strength is the careful selection of each of the above mentioned components based on technical merit The second edition completely revises all articles and features new material on the latest developments in XML UML The structure follows the definition of the major components of Enterprise Integration as defined by GERAM Generalised Enterprise Reference Architecture and Methodology 1st edition sold about 600 copies since January 2003
