*Multi-objective Evolutionary Optimisation for Product Design and Manufacturing* Lihui Wang, Amos H. C. Ng, Kalyanmoy Deb, 2011-09-06 With the increasing complexity and dynamism in today's product design and manufacturing more optimal robust and practical approaches and systems are needed to support product design and manufacturing activities Multi objective Evolutionary Optimisation for Product Design and Manufacturing presents a focused collection of quality chapters on state of the art research efforts in multi objective evolutionary optimisation as well as their practical applications to integrated product design and manufacturing Multi objective Evolutionary Optimisation for Product Design and Manufacturing consists of two major sections The first presents a broad based review of the key areas of research in multi objective evolutionary optimisation The second gives in depth treatments of selected methodologies and systems in intelligent design and integrated manufacturing Recent developments and innovations in multi objective evolutionary optimisation make Multi objective Evolutionary Optimisation for Product Design and Manufacturing a useful text for a broad readership from academic researchers to practicing engineers

Ant Colony Optimization Avi Ostfeld, 2011-02-04 Ants communicate information by leaving pheromone tracks A moving ant leaves in varying quantities some pheromone on the ground to mark its way While an isolated ant moves essentially at random an ant encountering a previously laid trail is able to detect it and decide with high probability to follow it thus reinforcing the track with its own pheromone The collective behavior that emerges is thus a positive feedback where the more the ants following a track the more attractive that track becomes for being followed thus the probability with which an ant chooses a path increases with the number of ants that previously chose the same path This elementary ant's behavior inspired the development of ant colony optimization by Marco Dorigo in 1992 constructing a meta heuristic stochastic combinatorial computational methodology belonging to a family of related meta heuristic methods such as simulated annealing Tabu search and genetic algorithms This book covers in twenty chapters state of the art methods and applications of utilizing ant colony optimization algorithms New methods and theory such as multi colony ant algorithm based upon a new pheromone arithmetic crossover and a repulsive operator new findings on ant colony convergence and a diversity of engineering and science applications from transportation water resources electrical and computer science disciplines are presented
