Seržant, Alena Witzlack-Makarevich, 2018 While there are languages that code a particular grammatical role e.g. subject or direct object in one and the same way across the board many more languages code the same grammatical roles differentially The variables which condition the differential argument marking or DAM pertain to various properties of the NP such as animacy or definiteness or to event semantics or various properties of the clause While the main line of current research on DAM is mainly synchronic the volume tackles the diachronic perspective The tenet is that the emergence and the development of differential marking systems provide a different kind of evidence for the understanding of the phenomenon The present volume consists of 18 chapters and primarily brings together diachronic case studies on particular languages or language groups including e.g. Finno Ugric Sino Tibetan and Japonic languages The volume also includes a position paper which provides an overview of the typology of different subtypes of DAM systems a chapter on computer simulation of the emergence of DAM and a chapter devoted to the cross linguistic effects of referential hierarchies on DAM **The Acquisition of Differential Object Marking** Alexandru Mardale, Silvina Montrul, 2020-06-15
