**Object Recognition** M. Bennamoun, G.J. Mamic, 2001-12-12 Automatic object recognition is a multidisciplinary research area using concepts and tools from mathematics computing optics psychology pattern recognition artificial intelligence and various other disciplines The purpose of this research is to provide a set of coherent paradigms and algorithms for the purpose of designing systems that will ultimately emulate the functions performed by the Human Visual System HVS Hence such systems should have the ability to recognise objects in two or three dimensions independently of their positions orientations or scales in the image The HVS is employed for tens of thousands of recognition events each day ranging from navigation through the recognition of landmarks or signs right through to communication through the recognition of characters or people themselves Hence the motivations behind the construction of recognition systems which have the ability to function in the real world is unquestionable and would serve industrial e.g. quality control military e.g. automatic target recognition and community needs e.g. aiding the visually impaired Scope Content and Organisation of this Book This book provides a comprehensive yet readable foundation to the field of object recognition from which research may be initiated or guided It represents the culmination of research topics that I have either covered personally or in conjunction with my PhD students These areas include image acquisition 3D object reconstruction object modelling and the matching of objects all of which are essential in the construction of an object recognition system *Object Recognition* M. **Attention and Performance in Computational Vision** Lucas Paletta, John K. Tsotsos, Erich Rome, Glyn Humphreys, 2004-12-27 In recent research on computer vision systems attention has been playing a crucial role in mediating bottom up and top down paths of information processing In applied research the development of enabling technologies such as miniaturized mobile sensors video surveillance systems and ambient intelligence systems involves the real time analysis of enormous quantities of data Knowledge has to be applied about what needs to be attended to and when and what to do in a meaningful sequence in correspondence with visual feedback Methods on attention and control are mandatory to render computer vision systems more robust The 2nd International Workshop on Attention and Performance in Computational Vision WAPCV 2004 was held in the Czech Technical University of Prague Czech Republic as an associated workshop of the 8th European Conference on Computer Vision ECCV 2004 The goal of this workshop was to provide an interdisciplinary forum

to communicate computational models of visual attention from various viewpoints such as from computer vision psychology robotics and neuroscience The motivation for interdisciplinarity was communication and inspiration beyond the individual community to focus discussion on computational modelling to outline relevant objectives for performance comparison to explore promising application domains and to discuss these with reference to all related aspects of cognitive vision The workshop was held as a single day single track event consisting of high quality podium and poster presentations Invited talks

were given by John K Tsotsos about attention and feature binding in biologically motivated computer vision and by Gustavo Deco about the context of attention memory and reward from the perspective of computational neuroscience The interdisciplinary program committee was composed of 21 internationally recognized researchers
