Ocean Optics:

Ocean Optics Richard W. Spinrad, Kendall L. Carder, Mary Jane Perry, 1994 Since the publication of Jerlov's classic volume on optical oceanography in 1968 the ability to predict or model the submarine light field given measurements of the inherent optical properties of the ocean has improved to the point that model fields are very close to measured fields In the last three decades remote sensing capabilities have fostered powerful models that can be inverted to estimate the inherent optical properties closely related to substances important for understanding global biological productivity environmental quality and most nearshore geophysical processes This volume presents an eclectic blend of information on the theories experiments and instrumentation that now characterize the ways in which optical oceanography is studied Through the course of this interdisciplinary work the reader is led from the physical concepts of radiative transfer to the experimental techniques used in the lab and at sea to process oriented discussions of the biochemical mechanisms responsible for oceanic optical variability The text will be of interest to researchers and students in physical and biological oceanography biology geophysics limnology atmospheric optics and remote sensing of ocean and global climate change

Atmospheric and Oceanic Optics, 2005 [Outstanding Topics in Ocean Optics](#) Dariusz Stramski, Hubert Loisels, 2019-04-23 Ocean optics is a branch of oceanography which is firmly embedded in studies of a great variety of ocean science and engineering questions The interactive nature between radiative transfer of light and various dissolved and particulate constituents of seawater is at the core of ocean optics science and applications The transfer of radiant solar energy has vital implications to life and climate on Earth and the large variety of subjects of ocean optics ranges from the subtle problems of physical optics to optical remote sensing towards a better understanding of ocean biology biogeochemistry and ecosystems and their roles in the Earth's system processes The intention of this book is to present a collection of papers that generally share a common denominator of frontier topics in ocean optics which are unique uncommon or outstanding in the literature and to provide a balanced view of the extraordinary breadth of research in this field Topics as diverse as measurements and modeling of radiative transfer light fields light scattering and polarization ocean color benthic optical properties and the use of optics for characterizing seawater constituents are addressed in this book The

book is expected to be of interest and useful to a broad audience of professional ocean scientists engineers and advanced students with an interest in ocean optics and applications of optical methods in oceanography Ocean Optics V: August 30-31, 1978, San Diego, California ,1978 *Ocean Optics Protocols for Satellite Ocean Color Sensor Validation, Revision 5* James L.
