Future research directions on human factors in software must be sensitive to issues arising out of evolving software practice Based on a historical distinction these practices can be divided into two groups conventional and modern A series of reports prepared by six large software contractors on the impact of modern programming methods provides a useful source for evaluating the effectiveness of various practices This paper critically analyzes selected contents of these reports and summarizes their conclusions as to the practical impact of modern programming practices In light of the results of this analysis a set of future research directions for work on human factors in software is then suggested
