**Modulation of Cellular Responses in Toxicity** Corrado L. Galli, Marina Marinovich, Alan M. Goldberg, 2013-06-29  
Proceedings of the NATO Advanced Study Institute on the Modulation of Cellular Response in Toxicity held in Ponte di Legno Italy January 24 February 3 1994     *Advances in Molecular Toxicology* Claude Reiss, Simone Parvez, Gilles Labbe, 1998-02  
Molecular toxicology is on the way to setting a new standard in toxic risk assessment with the powerful help of concepts and methods developed in the fields of molecular and cellular biology The methods of molecular toxicology are endowed with qualities not always secured in more traditional approaches to toxicity assessment These methods are easily standardized reliable reproducible and require only tiny amounts of the xenobiotic They are much simpler faster and less costly than current tests on animals and can be implemented with modest laboratory resources This volume of *Advances in Molecular Toxicology* represents a collection of invited papers presented at the First European Workshop on Molecular Toxicology in Sophia Antipolis France The book covers 8 selected topics in molecular toxicology The first two are devoted to physics dealing respectively with advanced instrumentation enabling location and quantification of xenobiotics in cells and organs with ultimate precision and computer assisted assessment of risk QSAR A comprehensive and up to date survey of molecular toxicology in the pharmaceutical industry is contributed by a pioneer in this field The third section addresses the effect of xenobiotics on cell cycle actors Sections 4 6 deal with molecular toxicology in skin kidney nerve liver and pancreatic cells The last two sections describe methods to probe DNA damage and repair and immunotoxicity     Information Resources in Toxicology P.J. Bert Hakkinen, Gerald Kennedy, Frederick W. Stoss, 2000-01-10 *Information Resources in Toxicology* Third Edition is a sourcebook for anyone who needs to know where to find toxicology information It provides an up to date selective guide to a large variety of sources books journals organizations audiovisuals internet and electronic sources and more For the Third Edition the editors have selected organized and updated the most relevant information available New information on grants and other funding opportunities physical hazards patent literature and technical reports have also been added This comprehensive time saving tool is ideal for toxicologists pharmacologists drug companies testing labs libraries poison control centers physicians legal and regulatory professionals and chemists Serves as an all in one resource for toxicology information New edition includes information on publishers grants and other funding opportunities physical hazards patent literature and technical reports Updated to include the latest internet and electronic sources e mail addresses etc Provides valuable data about the new fields that have emerged within toxicological research namely the biochemical cellular molecular and genetic aspects     Veterinary and Human Toxicology , 1996     **Toxicology of the Lung** Donald E. **Drug Toxicity in Embryonic Development I** Robert J. Kavlock, George P. Daston, 1997 Having received the invitation from Springer Verlag to produce a volume on drug induced birth defects for the Handbook of Experimental Pharmacology we asked ourselves what new approach could we offer that would capture the state of the science and bring a new synthesis of the information on this topic to the world's literature We chose a three pronged approach centered around those particular drugs for which we have a relatively well established basis for understanding how they exert their unwanted effects on the human embryo We then supplemented this information with a series of reviews of critical biological processes involved in the established normal developmental patterns with emphasis on what happens to the embryo when the processes are perturbed by experimental means Knowing that the search for mechanisms in teratology has often been inhibited by the lack of understanding of how normal development proceeds we also included chapters describing the amazing new discoveries related to the molecular control of normal morphogenesis for several organ systems in the hope that the experimental toxicologists and molecular biologists will begin to better appreciate each others questions and progress Several times during the last two years of developing outlines issuing invitations reviewing chapters and cajoling belated contributors we have wondered whether we made the correct decision to undertake this effort
