**Advances in Software Tools for Scientific Computing** Hans Petter Langtangen, Are M. Bruaset, Ewald Quak, To make full use of the ever increasing hardware capabilities of modern computers it is necessary to speedily enhance the performance and reliability of the software as well and often without having a suitable mathematical theory readily available In the handling of more and more complex real life numerical problems in all sorts of applications a modern object oriented design and implementation of software tools has become a crucial component The considerable challenges posed by the demand for efficient object oriented software in all areas of scientific computing make it necessary to exchange ideas and experiences from as many different sources as possible Motivated by the success of the first meeting of this kind in Norway in 1996 we decided to organize another International Workshop on Modern Software Tools for Scientific Computing often referred to as SciTools 98 This workshop took place in Oslo Norway September 14 16 1998 The objective was again to provide an open forum for exchange and discussion of modern state of the art software techniques applied to challenging numerical problems The organization was undertaken jointly by the research institute SINTEF Applied Mathematics the Departments of Mathematics and Informatics at the University of Oslo and the company Numerical Objects AS

**Advances in Software Tools for Scientific Computing** Hans Petter Langtangen, Are M. Bruaset, Ewald Quak, 2000 This book concerns programming techniques like object oriented programming and generic template programming These

modern techniques have proven to increase flexibility modularization code reuse and improve maintenance of large numerical codes The book contains 11 refereed and comprehensive chapters on major subjects in computational science and engineering quality measurement of numerical software high performance numerical computations with C without sacrificing efficiency a balanced discussion of Java in scientific computing object oriented design of direct sparse solvers geometric kernels in geographical information systems and tools for error estimation in finite element methods tools for validating computational results and how to simplify the implementation of highly complex mathematical model for material processing

**The Architecture of Scientific Software** Ronald F. Boisvert, Ping Tak Peter Tang, 2013-04-17 Scientific applications involve very large computations that strain the resources of whatever computers are available Such computations implement sophisticated mathematics require deep scientific knowledge depend on subtle interplay of different approximations and may be subject to instabilities and sensitivity to external input Software able to succeed in this domain invariably embeds significant domain knowledge that should be tapped for future use Unfortunately most existing scientific software is designed in an ad hoc way resulting in monolithic codes understood by only a few developers Software architecture refers to the way software is structured to promote objectives such as reusability maintainability extensibility and feasibility of independent implementation Such issues have become increasingly important in the scientific domain as software gets larger and more complex constructed by teams of people and evolved over decades In the context of scientific computation the challenge facing mathematical software practitioners is to design develop and supply computational components which deliver these objectives when embedded in end user application codes The Architecture of Scientific Software addresses emerging methodologies and tools for the rational design of scientific software including component integration frameworks network based computing formal methods of abstraction application programmer interface design and the role of object oriented languages This book comprises the proceedings of the International Federation for Information Processing IFIP Conference on the Architecture of Scientific Software which was held in Ottawa Canada in October 2000 It will prove invaluable reading for developers of scientific software as well as for researchers in computational sciences and engineering Applied Parallel and Scientific Computing Pekka Manninen, Per Öster, 2013-02-12 This volume constitutes the refereed proceedings of the 11th International Conference on Applied Parallel and Scientific Computing PARA 2012 held in Helsinki Finland in June 2012 The 35 revised full papers presented were selected from numerous submissions and are organized in five technical sessions covering the topics of advances in HPC applications parallel algorithms performance analyses and optimization application of parallel computing in industry and engineering and HPC interval methods In addition three of the topical minisymposia are described by a corresponding overview article on the minisymposia topic In order to cover the state of the art of the field at the end of the book a set of abstracts describe some of the conference talks not elaborated into full articles **Scientific Computing in Object-Oriented Parallel Environments** Yutaka Ishikawa, 1997-11-19 Content Description Includes
