Methods For Solving Incorrectly Posed Problems:

Methods for Solving Incorrectly Posed Problems V.A. Morozov, 1984-11-20 Some problems of mathematical physics and analysis can be formulated as the problem of solving the equation $f \in F$ $Au = f$ where $A: D \subset C(U) \rightarrow F$ is an operator with a non empty domain of definition D in a metric space U with range in a metric space F . The metrics A on U and F will be denoted by P and P respectively. Relative to the twin spaces U and F J. Hadamard [1906] gave the following definition of correctness: the problem 1 is said to be well posed (correctly posed) if the following conditions are satisfied: 1. The range of the value Q of the operator A coincides with $A(F)$; 2. Solvability condition: $Au = f$ for any $f \in F$ implies $u \in D$; 3. The equality $Au = f$ for any $u \in D$ implies $u \in U$. The uniqueness condition: 1. 2. 3. The inverse operator A^{-1} is continuous on F ; 4. Stability condition: Any reasonable mathematical formulation of a physical problem requires that conditions 1-3 be satisfied. That is why Hadamard postulated that any ill-posed (improperly posed) problem is one which does not satisfy conditions 1-3. It is non-physical. Hadamard also gave the now-classical example of an ill-posed problem, namely the Cauchy problem for the Laplace equation.

Surveys on Solution Methods for Inverse Problems David Colton, 2000-05-23 Inverse problems are concerned with determining causes for observed or desired effects. Problems of this type appear in many application fields both in science and in engineering. The mathematical modelling of inverse problems usually leads to ill-posed problems, i.e. problems where solutions need not exist, need not be unique or may depend discontinuously on the data. For this reason numerical methods for solving inverse problems are especially difficult: special methods have to be developed which are known under the term regularization methods. This volume contains twelve survey papers about solution methods for inverse and ill-posed problems.

and about their application to specific types of inverse problems e g in scattering theory in tomography and medical applications in geophysics and in image processing The papers have been written by leading experts in the field and provide an up to date account of solution methods for inverse problems *Handbook of Analytic Computational Methods in Applied Mathematics* George Anastassiou,2019-06-03 Working computationally in applied mathematics is the very essence of dealing with real world problems in science and engineering Approximation theory on the borderline between pure and applied mathematics has always supplied some of the most innovative ideas computational methods and original approaches to many types of problems The f

C.R. Cowley,M.M. Dworetsky,C. Mégessier,2012-12-06 This volume contains papers presented at IAU Colloquium No 90 at the Crimean Astrophysical Observatory in May of 1985 A few additional contributions are included from authors who for various reasons were unable to attend the meeting Four years have passed since the last major international conference on chemically peculiar stars of the upper main sequence was held in Liege Belgium in 1981 Previous conferences were held in 1975 Vienna Austria and in 1965 Greenbelt Maryland USA As the proceedings of this Colloquium show the recent availability of ultraviolet spectra of large numbers of normal and chemically peculiar A and B stars is having a major impact on the way we study these objects and has led to many new exciting and unanticipated results Simultaneously the more traditional study of optical spectra has been advanced through the increasing use of very high spectral resolution with high signal to noise detectors The chemically peculiar CP stars on the upper main sequence belong in the standard framework within which we understand stellar evolution and the history of matter Recent work has made it clear that the unusual chemistry and magnetic structure of these objects is of relevance across the broad domain of stellar astronomy from the upper main sequence to horizontal branch stars and white dwarfs Metal poor J Boo as well as metal rich Ap Am stars are an integral part of the picture

Inverse Stefan Problems N.L. Gol'dman,2012-12-06 In this monograph the theory and methods of solving inverse Stefan problems for quasilinear parabolic equations in regions with free boundaries are developed The study of this new class of ill posed problems is motivated by the needs of the modeling and control of nonlinear processes with phase transitions in thermophysics and mechanics of continuous media Inverse Stefan problems are important for the perfection of technologies both in high temperature processes e g metallurgy the aircraft industry aeronautics and power engineering and in hydrology exploitation of oil gas fields etc The proposed book will complete a gap in these subjects in the preceding re searches of ill posed problems It contains the new theoretical and applied studies of a wide class of inverse Stefan problems The statements of such problems on the determination of boundary functions and coefficients of the equation are considered for different types of additional information about their solution The variational method of obtaining stable approximate solutions is proposed and established It is implemented by an efficient computational scheme of descriptive regularization This algorithm utilizes a priori knowledge of the qualitative structure of the sought solution and ensures a substantial saving in

computational costs It is tested on model and applied problems in nonlinear thermophysics In particular the results of calculations for important applications in continuous casting of ingots and in the melting of a plate with the help of laser technology are presented *Inverse Heat Transfer* M.
