Methods In Human Cytogenetics:

Methods in Human Cytogenetics E. Passarge, H.G. Schwarzbacher, U. Wolf, 2012-12-06 This volume was originally intended to be an English translation of the book *Metalloden in der medizinischen Cytogenetik* published in 1970 Just about then however a number of new techniques were introduced in human cytogenetics and soon acquired the utmost importance particularly in clinical diagnosis so that the English edition had to be considerably enlarged As a result there are now twelve chapters instead of eight and two additional authors have been called upon Dr KRONE and Dr SCHNEDL In addition to the up to date presentation of conventional methods of cell culture and techniques for the preparation and identification of human chromosomes this text covers the various techniques of producing banding patterns and applying them in chromosome identification Further it deals with the culture of amniotic fluid cells and gives instructions for handling tissue culture cells for biochemical analysis it thus meets the ever increasing requirements of a modern cell culture laboratory To paraphrase the aims of this book we quote part of the preface to the German edition It was intended to collect the various methods so as to make them accessible for laboratory use Furthermore it is hoped that the reader faced with current research problems will be stimulated to modify and supplement the techniques described instead of merely applying them automatically In a rapidly developing field some methods are still preliminary and no final presentation seems possible

Methods in Human Cytogenetics H. G. Schwarzbacher, 1974 *Methods in human cytogenetics* Cell cultures from blood and bone marrow and tissue explants Culture and preparation of cells from amniotic fluid Preparation of metaphase chromosomes Fluorescence microscopy of chromosomes and interphase nuclei Banding patterns in human chromosomes visualized by giemsa staining after various pretreatments
