Methods Of Text And Discourse Analysis In Search Of Meaning:

Methods of Text and Discourse Analysis Stefan Titscher, Bryan Jenner, 2000-07-28 This volume is the most comprehensive overview to date of sociologically orientated approaches to text and discourse analysis and is worth reading even for those who are interested only in purely linguistic approaches to text and discourse. Its main merit I think is that it introduces approaches which up to now have hardly been admitted into the universe of scientific discourse. Discourse Studies Methods of Text and Discourse Analysis provides the most comprehensive overview currently available of linguistic and sociological approaches to text and discourse analysis. Among the 10 linguistic and sociological models surveyed in this book some of the more important are Grounded Theory, Content Analysis, Conversation Analysis and Critical Discourse Analysis. The book presents each approach according to a standardised format which allows for direct systematic comparisons. The fully annotated lists of sources provide readers with an additional means of evaluation of the competing analytical methods. Interdisciplinary and international in its aims, Methods of Text and Discourse Analysis suggests the benefits both linguists and sociologists will derive from a more intimate knowledge of each other's methods and procedures.

Karjalainen, 1990-12-17 This book comprises a large selection of papers presented at the second European Scientific Computing and Automation meeting SCA 90 Europe which was held in June 1990 in Maastricht, The Netherlands. The increasing use of computers for making measurements, interpreting data and filing results brings a new unity to science. SCA concentrates on common computer-based tools which are useful in several disciplines. Practical problems in laboratory automation, robotics and information management with LIMS are covered in depth. The process of designing and acquiring a LIMS is described and standards for data transfer between instruments, between LIMS and instruments and between different LIMS are discussed. The applications of statistics and expert systems are covered in several chapters. Strategies for drug design are discussed with various practical examples. Finally, the display of scientific results as images and computer-based animations is demonstrated by several examples with their color illustrations. The book should be of interest to those

managing R D projects doing research in laboratories acquiring or planning LIMS designing instruments and laboratory automation systems and those involved in data analysis of scientific results
