Biotechnological Processes Lei Zhi Chen, Sing Kiong Nguang, Xiao Dong Chen, 2007-07-04

Most industrial biotechnological processes are operated empirically One of the major difficulties of applying advanced control theories is the highly nonlinear nature of the processes This book examines approaches based on artificial intelligence methods in particular genetic algorithms and neural networks for monitoring modelling and optimization of fed batch fermentation processes The main aim of a process control is to maximize the final product with minimum development and production costs This book is interdisciplinary in nature combining topics from biotechnology artificial intelligence system identification process monitoring process modelling and optimal control Both simulation and experimental validation are performed in this study to demonstrate the suitability and feasibility of proposed methodologies An online biomass sensor is constructed using a current neural network for predicting the biomass concentration online with only three measurements dissolved oxygen volume and feed rate Results show that the proposed sensor is comparable or even superior to other sensors proposed in the literature that use more than three measurements Biotechnological processes are modelled by cascading two recurrent neural networks It is found that neural models are able to describe the processes with high accuracy Optimization of the final product is achieved using modified genetic algorithms to determine optimal feed rate profiles Experimental results of the corresponding production yields demonstrate that genetic algorithms are powerful tools for optimization of highly nonlinear systems Moreover a combination of recurrent neural networks and genetic algorithms provides a useful and cost effective methodology for optimizing biotechnological processes *Fermentation Processes* Ricardo Aguilar-López, 2024-11-20 The main purpose of this reprint is to present different approaches most commonly employed in

the analysis of bioprocesses This reprint aims to develop in some detail the bases and concepts of bioprocesses related to the bioprocess analysis introduced in basic principles of mathematical modeling From this viewpoint the system s approach to bioengineering and bioprocessing with its current focus on the development of mathematical approaches and their analysis is a logical sequel in understanding the mechanisms of cellular and metabolic processes Specifically it concerns applications in modeling estimation and optimization of bioprocesses Consequently this reprint presents key results in various fields including dynamic modeling dynamic properties of bioprocess models online estimation of parameters and state variables and optimization of bioprocesses
