Modeling With Nlp:

Modeling with NLP Robert Brian Dilts,2017-10-15 Modeling is the process of taking a complex event or phenomenon and breaking it into small enough chunks so that it can be recapitulated or applied in some way Behavioral modeling involves observing and mapping the successful processes which underlie an exceptional performance of some type The purpose of behavior modeling is to create a pragmatic map or model of a particular behavior which can be used to reproduce or simulate some aspect of that performance by anyone who is motivated to do so The ability to model effectively opens the door to many possibilities that have previously been unavailable to humankind In addition to providing a methodology which can be used to make ideas more explicit and easier to communicate modeling can transform the way we view and perceive one another If we see someone who does something better than ourselves for example instead of looking at that person and feeling inadequate jealous or suspicious we can go out and model how they do what they do The field of Neuro Linguistic Programming NLP has developed out of the modeling of the behaviors and thinking processes of exceptional people from many fields In fact the worldwide success of NLP as a technology for creating and managing change comes from its foundation in the modeling process This book is about the NLP modeling process and its applications The first part of this book is devoted to defining the principles and tools necessary for effective modeling the epistemology methodology and technology of NLP The second part of the book illustrates the application of NLP modeling procedures to the study of effective leadership It provides examples of how NLP was applied to identify specific cognitive linguistic and behavioral skills used by leaders to address challenging situations involving problem solving delegation and training on the job The results define the key communication and relational skills employed by effective leaders to achieve practical results in their working reality in order to create a world to which people want to belong

Practical Data Science with Hadoop and Spark Ofer Mendelevitch, Casey Stella, Douglas Eadline, 2016-12-08 *The Complete Guide to Data Science with Hadoop* For Technical Professionals, Businesspeople and Students. Demand is soaring for professionals who can solve real data science problems with Hadoop and Spark. *Practical Data Science with Hadoop and Spark* is your complete guide to doing just that. Drawing on immense experience with Hadoop and big data, three leading experts bring together everything you need: high level concepts, deep dive techniques, real world use cases, practical applications and hands-on tutorials. The authors introduce the essentials of data science and the modern Hadoop ecosystem, explaining how Hadoop and Spark have evolved into an effective platform for solving data science problems at scale. In addition to comprehensive application coverage, the authors also provide useful guidance on the important steps of data ingestion, data munging and visualization. Once the groundwork is in place, the authors focus on specific applications including machine learning, predictive modeling, for sentiment analysis, clustering for document analysis, anomaly detection and natural language processing (NLP). This guide provides a strong technical foundation for those who want to do practical data science and also presents business driven guidance on how to apply Hadoop and Spark to optimize ROI of data science initiatives. Learn what data science is, how it has evolved and how to plan a data science career. How data volume, variety and velocity shape data science use cases. Hadoop and its ecosystem, including HDFS, MapReduce, YARN and Spark. Data importation with Hive and Spark. Data quality, preprocessing, preparation and modeling. Visualization, surfacing insights from huge data sets. Machine learning, classification, regression, clustering and anomaly detection. Algorithms and Hadoop tools for predictive modeling. Cluster analysis and similarity functions. Large scale anomaly detection. NLP, applying data science to human language.
