The Econometric Modelling of Financial Time Series Terence C. Mills, Raphael N. Markellos, 2008-03-20 Terence

Mills best selling graduate textbook provides detailed coverage of research techniques and findings relating to the empirical analysis of financial markets. In its previous editions it has become required reading for many graduate courses on the econometrics of financial modelling. This third edition co authored with Raphael Markellos contains a wealth of material reflecting the developments of the last decade. Particular attention is paid to the wide range of nonlinear models that are used to analyse financial data observed at high frequencies and to the long memory characteristics found in financial time series. The central material on unit root processes and the modelling of trends and structural breaks has been substantially expanded into a chapter of its own. There is also an extended discussion of the treatment of volatility accompanied by a new chapter on nonlinearity and its testing. **Modelling Financial Time Series** Stephen J. Taylor, 2008. [Modelling Irregularly Spaced Financial Data](#) Nikolaus Hautsch, 2004-04-06 This book provides a methodological framework to model univariate and multivariate irregularly spaced financial data. It gives a thorough review of recent developments in the econometric literature, puts forward existing approaches and opens up new directions. The book presents alternative ways to model so called financial point processes using dynamic duration as well as intensity models and discusses their ability to account for specific features of point process data like the occurrence of time varying covariates, censoring mechanisms and multivariate structures. Moreover it illustrates the use of various types of financial point processes to model financial market activity from different viewpoints and to construct volatility and liquidity measures under explicit consideration of the passing trading time.

Time Series Analysis and Adjustment Haim Y. Bleikh, Professor Warren L. Young, 2014-07-01 In Time Series Analysis and Adjustment the authors explain how the last four decades have brought dramatic changes in the way researchers analyze economic and financial data on behalf of economic and financial institutions and to provide statistics. An understanding of time series and the application and knowledge of related time series adjustment procedures is essential in areas such as risk management, business cycle analysis and forecasting. The case studies in this book demonstrate that time series adjustment methods can be efficaciously applied and utilized for both analysis and forecasting but they must be used in the context of reasoned statistical and economic judgment. This is the first known published study to really deal with this issue of context.
