hydrogeological or environmental consultant in a water company in a regulatory agency or a university *Groundwater Modelling* W. Kinzelbach, 1986-01-01 With the growing concern about groundwater resources both with respect to quantity and quality the need for groundwater modelling tools is increasing Although there are a number of excellent introductions to the concepts of groundwater flow and pollution transport the student or practising engineer wishing to develop a model and do practical work on the computer finds that there is still a gap between the understanding of concepts and the ability to handle the actual computations A great deal of groundwater modelling software for personal computers and microcomputers has appeared recently but taking these models from the shelf and applying them without a background on their capabilities often leads to disappointment and frustration This book provides the reader with all necessary details to start modelling on his own It gives a comprehensive introduction to the major techniques currently used in the modelling of groundwater flow and pollutant transport in groundwater Both self contained and comprehensive it presents a wide variety of methods currently applied in the management protection and remediation of groundwater resources which allows the reader to take the step from understanding the concepts to the ability to handle actual computations All major techniques are illustrated by a total of 19 sample programs in BASIC which can be modified by the reader to suit his own need The programs can be run directly on an Apple II or compatible personal computer and with slight modifications most can be transferred to other microcomputers with BASIC capability and at least 48K of central memory The necessary modifications for running the programs on an IBM PC are indicated in the appendix Students and professionals in the fields of hydrogeology and civil and environmental engineering will find this to be an extremely useful book Knowledge of the basic concepts of hydrogeology is assumed and starting from that basis the book will enable them to understand mathematical groundwater models and write computer programs of their own *Effective Groundwater Model Calibration* Mary C. Modeling Groundwater Flow and Contaminant Transport Jacob Bear,Alexander H.-D. Cheng,2010-01-18 In many parts of the world groundwater resources are under increasing threat from growing demands wasteful use and contamination To face the challenge good planning and management practices are needed A key to the management of groundwater is the ability to model the movement of fluids and contaminants in the subsurface The purpose of this book is to construct conceptual and mathematical models that can provide the information required for making decisions associated with the management of groundwater resources and the remediation of contaminated aquifers The basic approach of this book is to accurately describe the underlying physics of groundwater flow and solute transport in heterogeneous porous media starting at the microscopic level and to rigorously derive their mathematical representation at the macroscopic levels The well posed macroscopic mathematical models are formulated for saturated single phase flow as well as for unsaturated and multiphase flow and for the transport of single and multiple chemical species Numerical models are presented and computer codes are reviewed as tools for solving the models

The problem of seawater intrusion into coastal aquifers is examined and modeled. The issues of uncertainty in model input data and output are addressed. The book concludes with a chapter on the management of groundwater resources. Although one of the main objectives of this book is to construct mathematical models, the amount of mathematics required is kept minimal.

Aquifer Simulation Model for Windows Wen-Hsing Chiang, Wolfgang Kinzelbach, Randolph Rausch, 1998. ASM Aquifer Simulation Model is a complete implementation of a 2-D groundwater model for use on a PC under MS Windows 3.1x, 95, 98. It was originally developed as a tool for the education of students in hydrogeology, civil and environmental engineering. The first version of ASM was published in 1989 and ran under MS-DOS. Readers unfamiliar with the theoretical background of groundwater hydraulics and groundwater modelling are referred to the textbooks listed in the references section of this manual.

Groundwater Modeling Using Geographical Information Systems George F. Pinder, 2002-11-06. Cutting edge techniques for groundwater modeling using GIS technology. *Groundwater Modeling Using Geographical Information Systems* covers fundamental information on flow and mass transport modeling and demonstrates how GIS technology makes these models and analyses more accurate than ever before. GIS technology allows for swift organization, quantification and interpretation of large quantities of geohydrological data with computer accuracy and minimal risk of human error. This book's companion Web site provides the Princeton Transport Code as well as the plug-in extensions required to interface this code with the Argus ONE numerical environment software enclosed with this book. Plug-in extensions for MODFLOW and MT3D computer codes can be found at the Argus ONE Web site www.argusint.com. The process for using the Geographic Modeling Approach (GMA) to model groundwater flow and transport is demonstrated step by step with a field example from Tucson, Arizona. The GMA is composed of the Argus ONE Geographic Information Modeling system and the Princeton Transport Code groundwater flow and transport model interfaced through the plug-in extension available on Argus ONE. Enhanced with more than 150 illustrations and screen captures, *Groundwater Modeling Using Geographical Information Systems* is a fundamental book for civil engineers, hydrologists, environmental engineers, geologists and students in these fields as well as software engineers working on GIS applications and environmental attorneys and regulators. When used in combination with the free modeling software, this book provides an excellent student text.
