Modern Grinding Process Technology:

Handbook of Modern Grinding Technology Robert I. King, Robert S. Hahn, 2012-12-06 The latest information indicates that the United States now spends in excess of 150 billion annually to perform its metal removal tasks using conventional machining technology. That estimate is increased from 115 billion 5 years ago. It becomes clear that metal removal technology is a very important candidate for rigorous investigation looking toward improvement of productivity within the manufacturing system. To aid in that endeavor an extensive program of research has developed within the industrial community with the express purpose of establishing a new scientific and applied base that will provide principles upon which new manufacturing decisions can be made. One of the metal removal techniques that has the potential for great economic advantages is high rate metal removal with related technologies. This text is concerned with the field of grinding as a subset of the general field of high rate metal removal. Related processes not covered in this text include such topics as turning, drilling and milling. In the final evaluation the correct decision in the determination of a grinding process must necessarily include an understanding of the other methods of metal removal. The term grinding as used herein includes polishing, buffing, lapping and honing as well as conventional definition removing either metallic or other materials by the use of a solid grinding wheel.

Principles of Modern Grinding Technology W. Brian Rowe, 2009-06-16 The book is aimed at practitioners, engineers, researchers, students and teachers. The approach is direct, concise and authoritative. Progressing through each major element of the grinding system and then on to machine developments and process control, the reader becomes aware of all aspects of operation and design. Trends are described, demonstrating key features. Coverage includes abrasives and super abrasives, wheel design, dressing technology, machine accuracy and productivity, grinding machine design, high speed grinding technology, cost optimization, ultra precision grinding, process control developments, vibration control, coolants and fluid delivery. Trends in high precision and high speed grinding are explored. Principles underlying improvements in machines and processes are explained. Numerically worked examples give scale to essential process parameters. Recent research findings and original contributions to knowledge are included. A number of ultra precision grinding machine developments are included.
