Outline Course of Pure Mathematics A. F. Horadam,2014-05-16 Outline Course of Pure Mathematics presents a unified treatment of the algebra geometry and calculus that are considered fundamental for the foundation of undergraduate mathematics This book discusses several topics including elementary treatments of the real number system simple harmonic motion Hooke s law parabolic motion under gravity sequences and series polynomials binomial theorem and theory of probability Organized into 23 chapters this book begins with an overview of the fundamental concepts of differential and integral calculus which are complementary processes for solving problems of the physical world This text then explains the concept of the inverse of a function that is a natural complement of the function concept and introduces a convenient notation Other chapters illustrate the concepts of continuity and discontinuity at the origin This book discusses as well the significance of logarithm and exponential functions in scientific and technological contexts This book is a valuable resource for undergraduates and advanced secondary school students

Decision Making for Leaders Thomas L. Saaty, This book is about how to make decisions using the Analytic Hierarchy Process The basics of the theory are described in a clear non technical manner with many examples It is suitable for business leaders and also is probably the best book for introducing the AHP to students at the college and graduate level In this fifth printing of the book the reader will find a new appendix containing real life applications that validate the use of the fundamental scale of the AHP

Mathematical Modelling, Optimization, Analytic and Numerical Solutions Pammy Manchanda,René Pierre Lozi,Abul Hasan

Siddiqi,2020-02-04 This book discusses a variety of topics related to industrial and applied mathematics focusing on wavelet theory sampling theorems inverse problems and their applications partial differential equations as a model of real world problems computational linguistics mathematical models and methods for meteorology earth systems environmental and medical science and the oil industry It features papers presented at the International Conference in Conjunction with 14th Biennial Conference of ISIAM held at Guru Nanak Dev University Amritsar India on 2 4 February 2018 The conference has emerged as an influential forum bringing together prominent academic scientists experts from industry and researchers The topics discussed include Schrodinger operators quantum kinetic equations and their application extensions of fractional integral transforms electrical impedance tomography diffuse optical tomography Galerkin method by using wavelets a Cauchy problem associated with Korteweg de Vries equation and entropy solution for scalar conservation laws This book motivates and inspires young researchers in the fields of industrial and applied mathematics
