## **Modern Architecture Through Case Studies:**

Modern Architecture Through Case Studies Peter Blundell-Jones, Peter Blundell Jones, 2002 Peter Blundell Jones details the inadequacy of the first histories of the Modern Movement by revealing the existence of suppressed alternative traditions within the movement and shows their great diversity through the use of case studies. Each case is analysed in detail then used as a springboard to explore different theoretical approaches. Case studies are shown to be the most effective way to explore this diversity and to get closer to the buildings discussed. Blundell Jones uses the Weissenhof as a general comparative study that is followed by single examples by chosen architects each taking a particular set of themes. Reappraise the modern movement with this informative scholarly and insightful text. Learn a new approach to the debates surrounding modern architecture and theory. Case studies illustrate the theory in a clear and accessible style.

*Constructing Identity in Contemporary Architecture* Peter Herrle, Stephanus Schmitz, 2009 The global spread of uniform modes of production and cultural values has been accompanied by a dissemination of stereotypes of modern architecture styles almost everywhere around the globe. Paradoxically the reverse process has also emerged. In some countries the elites feel the necessity to counterbalance the loss of identity and defend their own cultures against the intruding forces of globalization. What started as a defensive notion has developed into a more progressive attempt to re-create what has allegedly been lost. This trend is being strongly expressed in discourses about architecture in countries of the South. Who are the actors feeling compelled to construct new identities? How are these new identities in architecture created in various parts of the world? And which are the ingredients borrowed from various historical and ethnic traditions and other sources? These and other questions are discussed in five case studies from different parts of the world written by renowned scholars from Brazil, Mexico, Egypt, India and Singapore.

Modern Architecture Through Case Studies 1945 to 1990 Peter Blundell Jones, Eamonn Canniffe, 2012-08-21 Once again new interpretations are presented of some of the most famous architecture of the period. Work by lesser known architects whose influence and role have been overlooked by conventional histories of the subject is discussed. The case study structure allows each example to be discussed and used as a springboard to explore different theoretical approaches. Filled with beautiful photographs, plans and architect's drawings, this is a clear and accessible discussion on a period of architecture that engages many questions still under debate in architecture today.

**The Meaning of Modern Architecture** Dr Hans Rudolf Morgenthaler, 2015-08-28 Using empathy as established by the Vienna School of Art History complemented by insights on how the mind processes visual stimuli as demonstrated by late 19th century psychologists and art theorists this book puts forward an innovative interpretative method of decoding the forms and spaces of Modern buildings. This method was first developed as scholars realized that the new abstract art appearing needed to be analysed differently than the previous figurative works. Since architecture experienced a similar development in the 1920s and 30s this book argues that the empathetic method can also be used in architectural interpretation. While most

existing scholarship tends to focus on formal and functional analysis this book proposes that Modern architecture is too diverse to be reduced to a few common formal or ornamental features Instead by relying on the viewer's innate psycho physiological perceptive abilities sensual and intuitive understandings of composition form and space are emphasized These aspects are especially significant because Modern Architecture lacks the traditional stylistic signs Including building analyses it shows how by visually reducing cubical forms and spaces to linear configurations the exteriors and interiors of Modern buildings can be interpreted via human perceptive abilities as dynamic movement systems commensurate with the new industrial transportation age This reveals an inner necessity these buildings express about themselves and their culture rather than just an explanation of how they are assembled and how they should be used The case studies highlight the contrasts between buildings designed by different architects rather than concentrating on the few features that relate them to the zeitgeist It analyses the buildings directly as the objects of study not indirectly as designs filtered through a philosophical or theoretical discourse The book demonstrates that with technology and science affecting culture and the arts deeply Modern Architecture needs to be treated differently than earlier stylistic periods It proposes a new chronology of Modernity that analyses this period's own evolutionary trajectory and does not try to explain it as simply the last phase in artistic evolution since the beginning of human existence

*Architecture and Ritual* Peter Blundell Jones, 2016-08-25 Architecture and Ritual explores how the varied rituals of everyday life are framed and defined in space by the buildings which we inhabit It penetrates beyond traditional assumptions about architectural style aesthetics and utility to deal with something more implicit how buildings

shape and reflect our experience in ways of which we remain unconscious Whether designed to house a grand ceremony or provide shelter for a daily meal all buildings coordinate and consolidate social relations by giving orientation and focus to the spatial practices of those who use them Peter Blundell Jones investigates these connections between the social and the spatial providing critical insights into the capacity for architecture to structure human ritual from the grand and formal to the mundane This is achieved through deep readings of individual pieces of architecture each with a detailed description of its particular social setting and use The case studies are drawn from throughout architectural history and from around the globe each enabling a distinct theoretical theme to emerge and showing how social conventions vary with time and place as well as what they have in common Case studies range from the Nuremberg Rally to the Centre Pompidou and from the Palace of Westminster to Dogon dwellings in Africa and a Modernist hospital In considering how all architecture has to mesh with the habits beliefs rituals and expectations of the society that created it the book presents deep implications for our understanding of architectural history and theory It also highlights the importance for architects of understanding how buildings frame social space before they prescribe new architectural designs of their own The book ends with a recent example of user participation showing how contemporary user interest and commitment to a building can be as strong as ever
