## **Modern Colorants Synthesis And Structure:**

**Modern Colorants: Synthesis and Structure** A.T. Peters, H.S. Freeman, 1994-12-31 Although the research activities of dyestuff chemists worldwide have been influenced to a great extent in recent years by the need to respond to a variety of environmental issues associated with the manufacture and application of synthetic dyes and pigments a significant level of targeted research continues to be devoted to new chemistry aimed at enhancing the technical properties of dyes in commerce This book is a presentation of various aspects of basic research conducted during the past decade but not reported in the recent review literature The coverage herein is unique in that it emphasizes systematic approaches commonly utilized in the design and synthesis of dyes and pigments and the required intermediates While it is well known that certain transition metals are important in the synthesis of technically viable metallized dyes for polyamide and protein fibers these metals are demonstrated in Chapter 1 also to be effective agents in the regiospecific placement of substituents into azo compounds The scope and limitations of this chemistry are presented In other synthetic work a description of the different processes employed to produce the major families of reactive dyes is presented In Chapter 4 special attention is given to reactive dyes containing more than one reactive group and to the more recent developments in the field The two chapters which follow provide a review of the recent literature pertaining to novel chromophores and dyes for the D2T2 process respectively

**Chromic Phenomena** Peter Bamfield, 2007-10-31 Chromic phenomena or those produced by materials which exhibit colour in response to a chemical or physical stimulus have increasingly been at the heart of high tec developments in a variety of fields in the last decade Many of the newer technologies which are at the cutting edge of research are multi disciplinary involving researchers from areas as diverse as physics biology materials science and electronic engineering Chromic Phenomena covers five main areas Colour change materials such as photochromic thermochromic and electrochromic materials Materials which absorb and reflect light the classical dyes and pigments Luminescent phenomena including phosphorescence fluorescence and electroluminescence Materials which absorb light and transfer energy eg photosensitisers infra red absorbers and laser addressable compounds Phenomena involving the manipulation of light by chemicals such as liquid crystals lustre pigments optoelectronics and photonics Providing an entry point both for new researchers and for established ones this book with its emphasis on the technological applications of these chromic phenomena develops and investigates new applications for colour chemistry It will be of interest to industrialists and professionals in the biological medicinal electronics telecommunications and colorant industries as well as academics in these fields

*Physico-chemical Aspects of Textile Coloration* Stephen M. Burkinshaw, 2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to

the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres **Physico Chemical Aspects of Textile Coloration** provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO<sub>2</sub> fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration

Peters,H.S. Freeman,1996-05-31 At the beginning of this series of volumes on Color Chemistry the editors pointed to a number of events that have served as stimuli for technological advances in the field thus preventing dyestuff manufacturing from becoming what might otherwise be viewed by now as a sunset industry The volumes which followed have provided ample evidence for our belief that the field of colour chemistry is very much alive though arguably in need of further stimulus For instance a viable approach to the design of new chromophores and to the design of metal free acid direct and reactive dyes having fastness properties comparable to their metallized counterparts represent the kind of breakthroughs that would help ensure the continued success of this important field While it must be acknowledged that serendipity smiled on our discipline at its inception and has repeated the favor from time to time since then few would argue against the proposition that most of the significant advances in the technology associated with any scientific discipline result from research designed to enhance our understanding of the fundamental causes for experimental observations many of which are pursued because they are unexpected intriguing and intellectually stimulating Little reflection is required for one who knows the history of the dyestuff industry to realize that this is certainly true in the colour chemistry arena as it was basic research that led to fiber reactive dyes dyes for high technology and modern synthetic organic pigments      **Chemistry and Industry** ,1995      **The Cumulative Book Index** ,1996 A world list of books in the English language      **Textile Technology Digest** ,2002
