MODERN GEOMETRY CLAIRE FISHER ADLER,1967 *Modern Geometry* Claire Fisher Adler,1976 **A Course in Modern Geometries** Judith N. Cederberg,2013-03-09 A Course in Modern Geometries is designed for a junior senior level course for mathematics majors including those who plan to teach in secondary school Chapter 1 presents several finite geometries in an axiomatic framework Chapter 2 introduces Euclid s geometry and the basic ideas of non Euclidean geometry The synthetic approach of Chapters 1 2 is followed by the analytic treatment of transformations of the Euclidean plane in Chapter 3 Chapter 4 presents plane projective geometry both synthetically and analytically The extensive use of matrix representations of groups of transformations in Chapters 3 4 reinforces ideas from linear algebra and serves as excellent preparation for a course in abstract algebra Each chapter includes a list of suggested sources for applications and or related topics *Modern Geometry* Claire Fisher Adler,1958 **The Shape of Space** Graham Nerlich,1994-08-04 This is a revised and updated edition of Graham Nerlich s classic book 1976 It develops a metaphysical account of space that treats it as a real and concrete entity showing that shape plays a key explanatory role in space and spacetime theories Arguing that geometrical explanation is very like causal explanation Professor Nerlich prepares the ground for philosophical argument and investigates how different spaces would affect perception differently Along the way Professor Nerlich criticizes and rejects conventionalism as a non realist metaphysics of space concluding that there is in fact no problem of underdetermination for this aspect of spacetime theories while offering an extensive discussion of the relativity of motion
