Near The Edge:

EXAFS and Near Edge Structure A. Bianconi, L. Inoccia, S. Stipcich, 2012-12-06 The field of X ray spectroscopy using synchrotron radiation is growing so rapidly and expanding into such different research areas that it is now difficult to keep up with the literature EXAFS and XANES are becoming interdisciplinary methods used in solid state physics biology and chemistry and are making impressive contributions to these branches of science The present book gives a panorama of the research activity in this field It contains the papers presented at the International Conference on EXAFS and Near Edge Structure held in Frascati Italy September 13-17 1982 This was the first international conference devoted to EXAFS spectroscopy Extended X ray Absorption Fine Structure and its applications The other topic of the conference was the new XANES X ray Absorption Near Edge Structure which in of experimental and theoretical developments finally appears to have terms left its infancy The applications of EXAFS concern the determination of local structures in complex systems we have therefore divided the subject matter into different parts on various types of materials amorphous metals glasses solutions biological systems catalysts and special crystals such as mixed valence systems and ionic conductors EXAFS provides unique information for each kind of system but the analysis of EXAFS data also poses special problems in each case General problems of EXAFS data analysis are discussed as well as developments in instrumentation for X ray absorption using synchrotron radiation and laboratory EXAFS

EXAFS and Near Edge Structure III K. O. Hodgson, B. Hedman, J. E. Penner-Hahn, 2013-11-11 This volume contains the Proceedings of the Third International EXAFS Conference hosted by Stanford University and the Stanford Synchrotron Radiation Laboratory on July 16-20 1984 The meeting co chaired by Professors Arthur Bienenstock and Keith Hodgson was attended by over 200 scientists representing a wide range of scientific disciplines The format of the meeting consisted of 51 invited presentations and four days of poster sessions This Proceedings is a compilation of 139 contributions from both invited speakers and authors of contributed posters The last ten years has seen the rapid maturation of x ray absorption spectroscopy as a scientific discipline The vitality of the field is reflected in the diversity of applications found in the Proceedings Recent work continues to probe the limits of x ray spectroscopy with proven techniques being extended to for example very low or high energy studies to very dilute systems and to studies of surface structure In fact the title of the conference does not at all reflect the breadth of the science discussed at this meeting The number of fields in which x ray absorption spectroscopy is finding applications has increased dramatically even in the two years since the previous International Conference held in Frascati The prospects for continued growth and innovation will be even further enhanced if a new generation 6 GeV storage ring is constructed in the next five years
