Neglect Of Experiment:

The Neglect of Experiment Allan Franklin, 1989-09-29 What role have experiments played and should they play in physics How does one come to believe rationally in experimental results The Neglect of Experiment attempts to provide answers to both of these questions Professor Franklin's approach combines the detailed study of four episodes in the history of twentieth century physics with an examination of some of the philosophical issues involved The episodes are the discovery of parity nonconservation or the violation of mirror symmetry in the 1950s the nondiscovery of parity nonconservation in the 1930s when the results of experiments indicated at least in retrospect the symmetry violation but the significance of those results was not realized the discovery and acceptance of CP combined parity charge conjugations particle antiparticle symmetry and Millikan's oil drop experiment Franklin examines the various roles that experiment plays including its role in deciding between competing theories confirming theories and calling for new theories The author argues that one can provide a philosophical justification for these roles He contends that if experiment plays such important roles then one must have good reason to believe in experimental results He then deals with several problems concerning such results including the epistemology of experiment how one comes to believe rationally in experimental results the question of the influence of theoretical presuppositions on results and the problem of scientific fraud This original and important contribution to the study of the philosophy of experimental science is an outgrowth of many years of research Franklin brings to this work more than a decade of experience as an experimental high energy physicist along with his significant contributions to the history and philosophy of science Experiment, Right Or Wrong Allan Franklin, 1990-05-25

In Experiment Right or Wrong Allan Franklin continues his investigation of the history and philosophy of experiment presented in his previous book *The Neglect of Experiment* In this new study Franklin considers the fallibility and corrigibility of experimental results and presents detailed histories of two such episodes 1 the experiment and the development of the theory of weak interactions from Fermi's theory in 1934 to the V-A theory of 1957 and 2 atomic parity violation experiments and the Weinberg-Salam unified theory of electroweak interactions of the 1970s and 1980s In these episodes Franklin demonstrates not only that experimental results can be wrong but also that theoretical calculations and the comparison between experiment and theory can also be incorrect In the second episode Franklin contrasts his view of an evidence model of science in which questions of theory choice confirmation and refutation are decided on the basis of reliable experimental evidence with that proposed by the social constructivists Report on the Work and Expenditures of the Agricultural Experiment Stations, 1904 XIII

Mediterranean Conference on Medical and Biological Engineering and Computing 2013 Laura M. Roa Romero, 2013-10-01 The general theme of MEDICON 2013 is Research and Development of Technology for Sustainable Healthcare This decade is being characterized by the appearance and use of emergent technologies under development This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards

novel concept and practices The consequence will be a significant improvement in health care and well fare i e the shift from a reactive medicine to a preventive medicine This shift implies that the citizen will play an important role in the healthcare delivery process what requires a comprehensive and personalized assistance In this context society will meet emerging media incorporated to all objects capable of providing a seamless adaptive anticipatory unobtrusive and pervasive assistance The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society while new paradigms are created for this inclusive society to be socially and economically sustainable and respectful with the environment In this way these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications Experiments Upon Magnesia Alba, Quick-lime, and Other Alkaline Substances Black,1893 **The**
