Unlike data communications of the past today s networks consist of numerous devices that handle the data as it passes from the sender to the receiver However security concerns are frequently raised in circumstances where interconnected computers use a network not controlled by any one entity or organization Introduction to Network Security examines various network protocols focusing on vulnerabilities exploits attacks and methods to mitigate an attack The book begins with a brief discussion of network architectures and the functions of layers in a typical network It then examines vulnerabilities and attacks divided into four categories header protocol authentication and traffic based The author next explores the physical network and transport layers of each network as well as the security of several common network applications The last section recommends several network based security solutions that can be successfully deployed This book uses a define attack defend methodology for network security The author briefly introduces the relevant protocols and follows up with detailed

descriptions of known vulnerabilities and possible attack methods He delineates the threats against the protocol and presents possible solutions Sample problems and lab experiments based on the concepts allow readers to experiment with attacks and assess the effectiveness of solutions Two appendices provide further clarification and a companion website is offered which supplements the material While most of the books available on this subject focus solely on cryptographic techniques to mitigate attacks this volume recognizes the limitations of this methodology and considers a wider range of security problems and solutions By focusing on a practical view of network security and examining actual protocols readers can better understand the vulnerabilities and develop appropriate countermeasures

Herbers, 2012-12-06 Interoperability has been a requirement in NATO ever since the Alliance came into being an obvious requirement when 16 independent Nations agree to allocate national resources for the achievement of a common goal to maintain peace With the appearance of data processing in the command and control process of the armed forces the requirement for interoperability expanded into the data processing field Although problems of procedural and operational interoperability had been constantly resolved to some extent as they arose over the years the introduction of data processing increased the problems of technical interoperability The increase was partially due to the natural desire of nations to support their own national industries But it was definitely also due to the lack of time and resources needed to solve the problems During the mid and late 1970s the International Standards Organisation ISO decided to develop a concept model which would allow systems to intercommunicate The famous ISO 7 layer model for Open Systems Interconnection OSI was born The OSI model was adopted by NATO in 1983 as the basis for standardization of data communications in NATO The very successful first Symposium on Interoperability of ADP Systems held in November 1982 at the SHAPE Technical Centre STC gave an extensive overview of the work carried out on the lower layers of the model and revealed some intriguing ideas about

the upper layers The first Symposium accurately reflected the state of the art at that point in time
