

Equation

Conventional approach:
Equations are handcrafted.

$$\frac{\partial u}{\partial t} = -\alpha u \frac{\partial u}{\partial x} - \beta \frac{\partial^3 u}{\partial x^3}$$

High cost: difficult to model complex phenomena

Simulation:
Predict physical phenomena given
any initial condition

Our approach:
Machine learning with laws of physics

No equation design required: learning complex
phenomena by using machine learning techniques

$$\frac{\partial u}{\partial t} = f(u; \theta)$$

Machine-

Significance:
Simulation of physical phenomena

Modeling Complex Phenomena:

Modeling Complex Phenomena Lui Lam, Vladimir Naroditsky, 2012-12-06 Once upon a time science was not divided into disciplines as we know it today There was no distinction between so called social and natural sciences not to mention the fragmentation of the latter into physics chemistry biology geology etc According to legend the scientists those days would do their research in whatever environment they happened to find comfortable which more often than not was in bathtubs or giant hot tubs remember Archimedes Then somehow these days we find ourselves compartmentalized into different departments in our universities or divisions in our research institutes We suspect for one thing that is to ensure that we will get our paychecks delivered on time at the end of each month Anyway as anyone who has worked in the real world knows when one is confronted with a completely new problem or phenomenon it is usually impossible to neatly assign the problem to physics chemistry or for that matter computer science One needs to recall and fuse together the knowledge one learned before and if that alone is insufficient to consult experts in other areas This points to the shortcomings of the compartmentalization of knowledge in our educational systems In recent years something has changed Under the banner of Complex Systems some brave souls are not afraid to tackle problems that are considered intractable by others and dare to venture out of their trained disciplines or departments to which they are attached

Modeling Complex Phenomena Using Multiscale Time Sequences, 2009 The purpose of the work funded by this grant was to study and model complex phenomena by using an approach that makes use of multiscale time sequences The underlying idea is that a complex dynamical system can be better interpreted and modeled by taking into account how its dynamics behaves at different scales and how these scales relate to each other This can be done

by combining a set statistical fractal measures based on Hurst and Holder exponents auto regressive methods and Fourier and wavelet decomposition methods The applications for this technology include mathematical algorithms to model and predict geophysical phenomena such as climate and weather patterns as well as biological biomedical phenomena such as for example for the treatment of injured individuals Modeling Complex Phenomena with Artificial Neural Networks Jukka Vanhala,1998 *Modeling Complex Systems* Nino Boccara,2014-01-15 **Modelling and Simulation in Science** Vito Di Gesù,Giosuè Lo Bosco,Maria Concetta Maccarone,L. Assaraf,2023-11-15 Understanding the complexity of the natural world and making sense of phenomena is one of the main goals of science and science education When investigating complex phenomena such as climate change or pandemic outbreaks students are expected to engage in systems thinking by considering the boundaries of the investigated system identifying the relevant components and their interactions and exploring system attributes such as hierarchical organization dynamicity feedback loops and emergence Scientific models are tools that support students reasoning and understanding of complex systems and students are expected to develop their modeling competence and to engage in the modeling process by constructing testing revising and using models to explain and predict phenomena Computational modeling tools for example provide students with the opportunity to explore big data run simulations and investigate complex systems Therefore both systems thinking and modeling approaches are important for science education when investigating complex phenomena

Culture and the Evolutionary Process Robert Boyd,Peter J. Richerson,1988-06-15 How do biological psychological sociological and cultural factors combine to change societies over the long run Boyd and Richerson explore how genetic and cultural factors interact under the influence of evolutionary forces to produce the diversity we see in human cultures Using methods developed by population biologists they propose a theory of cultural evolution that is an original and fair minded alternative to the sociobiology debate Modeling and Visualization of Complex Systems and Enterprises William B.
