The Place of Glass in Building John

Gloag, 2022-10-24 Originally published in 1943. The Place of Glass in Building is a comprehensive and compact survey of the structural uses of glass in 20th Century architecture. It gives the facts about the physical properties, the possibilities and the limitations of the glass in common use. It also deals with the attributes of specialised and decorative glass and provides detailed descriptions of the principal types which were manufactured in the UK. Intended for architectural students, it may also be of interest to architects for it is a condensed survey of the progress that has been made in this structural and decorative material.
