Computer Networking: The Complete Guide Benjamin Murray, 2021-11-16 A computer network is defined as a digital communications network which allows sharing of information and resources between nodes. The network between these nodes could be either wired, optical, wireless, or a combination of them. The nodes could include a variety of devices such as servers, personal computers, networking hardware, etc. Depending upon the size of the networks or the number of devices connected, they can be classified into four categories: namely, personal area network (PAN), local area network (LAN), metropolitan area network (MAN), and wide area network (WAN). They can also be classified on the basis of the layout arrangements into bus, star, ring, mesh, and tree topology. Computer networks have many applications such as access to World Wide Web, instant messaging, e-mail, and shared use of devices like fax machines, printers, storage servers, etc. The topics included in this book on computer networking are of utmost significance and bound to provide incredible insights to readers. It explores all the important aspects of computer networking in the present day scenario. Those in search of information to further their knowledge will be greatly assisted by this book.

Network Tutorial Steve Steinke, 2003-01-01 Network Tutorial delivers insight and understanding about network technology to managers and executives trying to get up to speed or stay current with the complex challenges of designing, constructing, maintaining, upgrading, and managing the network.

Computer Networking for Beginners John Hush, 2020-10-11 Do you want to expand your knowledge in the field of computer networking? Do you want to know the future of networking? Do you ever wonder how the internet works? If it does keep reading. Computer networking can be defined as the technology that makes communication between different computer systems or devices sprinkled all around the globe possible. Computer networking can also be considered to be a subpart of telecommunications, computer science, information technology, and computer engineering as it uses technology that heavily relies upon the various applications of these scientific and engineering streams. Based upon the area of communication and the abilities to cater to the specific needs of particular crowds, computer networks can be divided into three large divisions. They are Internet, Intranet, Extranet. There are two methods by which a network between different computer devices can be facilitated: wired connection and wireless connections. With so many fast-paced facilities and the convenient interface between the users and devices, it is virtually impossible to carry on with our tasks without the concept of computer networking. There are a lot of things for which we use computer networking in our life. Some of them are: The main goal of computer networking is, of course, to make sharing of resources and data possible all over the world in a small amount of time. Server-Client model. This structure is aptly suited for the corporate world where the networking functions are overseen by a central administrator and all the other computers connected to it are called as clients, as used by the employees of the company. Promoting e-commerce platforms. Apart from these, networking also plays a huge role in our day-to-day activities.
