Moral Darwinism:

Moral Darwinism Benjamin Wiker, 2009-09-20 Abortion Euthanasia Infanticide Sexual promiscuity Ideas and actions once unthinkable have become commonplace We seem to live in a different moral universe than we occupied just a few decades ago Consent and noncoercion seem to be the last vestiges of a morality long left behind Christian moral tenets are now easily dismissed and have been replaced with what is curiously presented as a superior more magnanimous respectful and even humble morality How did we end up so far away from where we began Can the decline be stopped Ben Wiker in this provocative and insightful book traces the amazing story that explains our present cultural situation Wiker finds the roots of our moral slide reaching all the way back to the ethical theory and atheistic cosmology of the ancient Greek philosopher Epicurus Christian teaching had been in contention with this worldview long before it reached its pinnacle with the rise and acceptance of Darwinism But it was Darwinism Wiker contends that provided this ancient teaching with the seemingly modern and scientific basis that captured twentieth century minds Wiker demonstrates that this ancient atomistic and materialistic philosophy supplies the guiding force behind Darwinism and powerfully propels the hedonistic bent of our society while promoting itself under the guise of pure science This book is a challenge not only to those who believe Darwinism to be purely scientific fact but to Christian who have at times inconsistently lived out their Christian moral convictions and so have failed to recognize and address the ancient corrosive underpinnings of our present moral and intellectual crisis

Created from Animals James Rachels, 1991 Western philosophy and religion James Rachels argues have been shaken by the implications of Darwin's work most notably the controversial idea that humans are simply a more complex kind of animal Here Rachels assesses a number of studies that suggest how closely humans are linked to other primates in behavior and then goes on to show how this idea undercuts the work of many prominent philosophers Created from Animals offers a provocative look at how Darwinian evolution undermines many tenets of traditional philosophy and religion Rachels begins by examining Darwin's own life and work presenting an astonishingly vivid and compressed biography We see Darwin's studies of the psychological links in evolution such as emotions in dogs and the mental powers of worms and how he addressed the moral implications of his work especially in his concern for the welfare of animals Rachels goes on to present a lively and accessible survey of the controversies that followed in Darwin's wake ranging from Herbert Spencer's Social Darwinism to Edward O Wilson's sociobiology and discusses how the work of such influential intellectuals as Descartes Hume Kant T H Huxley Henri Bergson B F Skinner and Stephen Jay Gould has contributed to or been overthrown by evolutionary science With this sweeping survey of the arguments the philosophers and the deep implications surrounding Darwinism Rachels lays the foundations for a new view of morality Virbrantly written and provocatively argued Created from Animals offers a new perspective on issues ranging from suicide to euthanasia to animal rights

Handbook of Evolutionary Thinking in the Sciences Thomas Heams, Philippe Huneman, Guillaume Lecointre, Marc Silberstein, 2014-11-23 The Darwinian

theory of evolution is itself evolving and this book presents the details of the core of modern Darwinism and its latest developmental directions. The authors present current scientific work addressing theoretical problems and challenges in four sections beginning with the concepts of evolution theory its processes of variation heredity selection adaptation and function and its patterns of character species descent and life. The second part of this book scrutinizes Darwinism in the philosophy of science and its usefulness in understanding ecosystems whilst the third section deals with its application in disciplines beyond the biological sciences including evolutionary psychology and evolutionary economics Darwinian morality and phylolinguistics. The final section addresses anti Darwinism the creationist view and issues around teaching evolution in secondary schools. The reader learns how current experimental biology is opening important perspectives on the sources of variation and thus of the very power of natural selection. This work examines numerous examples of the extension of the principle of natural selection and provides the opportunity to critically reflect on a rich theory on the methodological rigour that presides in its extensions and exportations and on the necessity to measure its advantages and also its limits. Scholars interested in modern Darwinism and scientific research its concepts research programs and controversies will find this book an excellent read and those considering how Darwinism might evolve how it can apply to the human sciences and other disciplines beyond its origins will find it particularly valuable. Originally produced in French *Les Mondes Darwiniens* the scope and usefulness of the book have led to the production of this English text to reach a wider audience. This book is a milestone in the impressive penetration by Francophone scholars into the world of Darwinian science its historiography and philosophy over the last two decades. Alex Rosenberg R Taylor Cole Professor of Philosophy Duke University. Until now this useful and comprehensive handbook has only been available to francophones. Thanks to this invaluable new translation this collection of insightful and original essays can reach the global audience it deserves. Tim Lewens University of Cambridge

Environmental Ethics, Ecological Theology, and Natural Selection Lisa H. Sideris, 2003. Lisa Sideris proposes a new way of thinking about the natural world an environmental ethic that incorporates the ideas of natural selection and values the processes rather than the products of nature. Such an approach encourages us to take a minimally interventionist approach to nature. Only when the competitive realities of evolution are faced squarely Sideris argues can we generate practical environmental principles to deal with such issues as species extinction and the relationship between suffering and sentience. Darwin and the Emergence of Evolutionary Theories of Mind and Behavior Robert J. Richards, 1987. With insight and wit Robert J Richards focuses on the development of evolutionary theories of mind and behavior from their first distinct appearance in the eighteenth century to their controversial state today. Particularly important in the nineteenth century were Charles Darwin's ideas about instinct reason and morality which Richards considers against the background of Darwin's personality training scientific and cultural concerns and intellectual community. Many critics have argued that the

Darwinian revolution stripped nature of moral purpose and ethically neutered the human animal Richards contends however that Darwin Herbert Spencer and their disciples attempted to reanimate moral life believing that the evolutionary process gave heart to unselfish altruistic behavior Richards s book is now the obvious introduction to the history of ideas about mind and behavior in the nineteenth century Mark Ridley Times Literary Supplement Not since the publication of Michael Ghiselin s *The Triumph of the Darwinian Method* has there been such an ambitious challenging and methodologically self conscious interpretation of the rise and development and evolutionary theories and Darwin s role therein John C Greene Science His book triumphantly achieves the goal of all great scholarship it not only informs us but shows us why becoming thus informed is essential to understanding our own issues and projects Daniel C Dennett Philosophy of Science *The Moral Animal*

Hilary Putnam,Susan Neiman,Jeffrey P. Schloss,2014-07-18 This volume brings together leading scholars to examine Darwinian perspectives on morality from widely ranging disciplines evolutionary biology anthropology psychology philosophy and theology They bring not only varied expertise but also contrasting judgments about which and to what extent differing evolutionary accounts explain morality They also consider the implications of these explanations for a range of religious and non religious moral traditions The book first surveys scientific understandings of morality Chapters by Joan Silk and Christopher Boehm ask what primatology and anthropology tell us about moral origins Daniel Batson and Stephen Pinker provide contrasting accounts of how evolution shapes moral psychology and Jeffrey Schloss assesses a range of biological proposals for morality and altruism Turning to philosophical issues Martha Nussbaum argues that recognizing our animal nature does not threaten morality Stephen Pope and Timothy Jackson explore how Darwinian accounts of moral goodness both enrich and require understandings outside the sciences Hilary Putnam and Susan Neiman ask whether Darwin is truly useful for helping us to understand what morality actually is and how it functions The book is a balanced effort to assess the scientific merits and philosophical significance of emerging Darwinian perspectives on morality *Social Darwinism and English Thought* Greta Jones,1980 Darwinismus Soziologie *Chambers' Encyclopædia* ,1893 *Evolution and Ethics*
