Olson,Gustav Kuhn,2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic relationship between psychological science and the art of magic On the one hand magic can inform psychology with particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe participants in more natural environments compared to the traditional lab based settings Examining how magicians consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic effects depend on meaningful psychological

knowledge such as which type of information is difficult to retain or what changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception **The Magic Wand and Magical Review** ,1929 *Teaching Is an Art* Leon Spreyer,2002-06-10 I re read this book every summer to help me maintain a balanced perspective as I plan for a new school year Gary Tsuruda Math teacher Jordan Middle School Palo Alto CA Teaching Is an Art can help new teachers adjust more smoothly into the education profession and can provide new ideas and insights for veteran teachers John Thompson Assistant Principal El Camino High School South San Francisco CA If you read only one book on teaching make it this one A practical direct and humorous guide to teaching you won t be able to turn the pages fast enough Drawing upon close to 30 years of teaching experience the author provides teachers with practical information that is not always taught in teacher education courses New and veteran teachers alike will find useful advice for managing their work both in and out of the classroom The book covers 82 essential topics including Cooperative Learning Parents Staff Meetings Tests Portfolios Rules and many more Teaching ability wisdom and fervor are not inborn teachers learn the elements of their art With that in mind Spreyer provides information games book recommendations specific lesson plans and straightforward advice on all aspects of teaching ranging from Back to School Night to Power in the Classroom from Principles to Principals from Homework to Substitute Teachers And he does it in a reader friendly style with easy to follow lists examples and suggested resources Highlights include Practical advice on over 80 subjects to apply both in the classroom and out Book suggestions and games for the classroom For veteran teachers suggestions for staying motivated and avoiding burnout For new teachers specifics you can t get anywhere else such as tips on the First Day and First Week of School and gaining Respect in the classroom
