Fake News and Information Disorder in the Era of Advance Information Technology Adeyinka Tella, Oluwale O Durodolu, 2025-09-01 Information pollution on a worldwide scale is a new phenomenon brought on by the advancement of modern advanced social information technology. The long term effects of disinformation efforts are the most concerning because they are difficult to evaluate in terms of their direct and indirect effects. Information disorder also known as misinformation, disinformation, and malinformation is currently wreaking havoc in our society. It is defined as the spreading or development of inaccurate information with or without the aim to harm. Due to the extensive harm it has already done on all of these levels politically, economically, culturally, socially, spiritually, and even psychologically, immediate action is required to stop the situation. As a result, the book *Fake News and Information Disorder in the Era of Advance Information Technology* is an effort to thoroughly examine information disorder, its related challenges, the role that libraries and other information organizations can play, and to outline approaches to addressing information pollution. Encyclopedia of Children, Adolescents, and the Media Jeffrey Jensen Arnett, 2006-12-14 From Internet censorship to sex and violence on television and in video games to debates over rock lyrics, the effect of media on children and adolescents is one of the most widely debated issues in our society. The *Encyclopedia of Children, Adolescents, and the Media* presents state of the art research and ready to use facts on the media's interaction with children and adolescents. With more than 400 entries, the two volumes of this resource cover the traditional and electronic media and their controversial impact for good and ill on children and adolescents. **Modern Media Literacy: Generative AI, Social Media, and the News** Hallaq, Tom, Groshek, Jacob, 2025-09-04 In an era defined by digital transformation, modern media literacy evolves to address generative AI, social media, and the news. As AI-driven tools shape the creation and dissemination of information, traditional boundaries blur, challenging individuals to critically assess sources, motives, and authenticity. Social media platforms increase these dynamics, accelerating the spread of both credible journalism and misleading content generated by algorithms. In this context, media literacy navigates a system where human and machine-produced content coexist. Understanding how generative AI influences media narratives may foster more informed, responsible, and resilient digital citizens. *Modern Media Literacy: Generative AI, Social Media, and the News* explores the evolving landscape of media consumption and critical analysis in the digital age. It examines how digital media literacy can be assessed in higher education, emphasizing the need for valid and reliable tools to measure the critical skills students need to navigate today's complex media environment. This book covers topics such as critical thinking, digital technology, and social media and is a useful resource for media and communications professionals, sociologists, computer engineers, educators, academicians, researchers, and scientists.
