## Puzzle 1

James and Tyler began a race of 1000 yards. James ran 200 yards in each lap. Tyler ran 150 yards and stopped to stretch after every 5 laps. Tyler ran 1000 yards and got 10 more laps of 200 yards each. At the end, who had run more yards?

$$20x - 6x = 20 + 5x$$

## Puzzle 2

For their favorite video game, each player needs 1000 coins. After the completion of three levels, there are 100 coins left. On the completion of the fourth level, the following coin exchange is recorded: 100 coins are exchanged for 100 coins and 10 coins are given away. After the completion of the fifth level, 100 coins are exchanged for 100 coins and 10 coins are given away.

$$20x + 100 = 100x - 10$$

## Puzzle 3

Two garments, a jacket and a skirt, were bought for a total of \$100. The jacket costs 100% more than the skirt. Given the information, calculate the cost of the jacket.

$$2x - 10 = 100x + 10$$

## Puzzle 4

Mathematics for Elementary School Teachers Phares G. O'Daffer,2002 Mathematics for Elementary School Teachers 2 e provides a unique opportunity for students to develop a clear understanding of mathematical concepts procedures and processes to communicate these ideas to others and to apply them to the real world The goal is to achieve the optimum balance between presenting a thorough development of mathematical content and presenting it in a way that is understandable by students The material has been revised so that it powerfully embodies the new Principles and Standards for School Mathematics of the National Council of Teachers of Mathematics

Mathematics for the Life Sciences Glenn Ledder,2013-08-29 Mathematics for the Life Sciences provides present and future biologists with the mathematical concepts and tools needed to understand and use mathematical models and read advanced mathematical biology books It presents mathematics in biological contexts focusing on the central mathematical ideas and providing detailed explanations The author assumes no mathematics background beyond algebra and precalculus Calculus is presented as a one chapter primer that is suitable for readers who have not studied the subject before as well as readers who have taken a calculus course and need a review This primer is followed by a novel chapter on mathematical modeling that begins with discussions of biological

data and the basic principles of modeling. The remainder of the chapter introduces the reader to topics in mechanistic modeling deriving models from biological assumptions and empirical modeling using data to parameterize and select models. The modeling chapter contains a thorough treatment of key ideas and techniques that are often neglected in mathematics books. It also provides the reader with a sophisticated viewpoint and the essential background needed to make full use of the remainder of the book which includes two chapters on probability and its applications to inferential statistics and three chapters on discrete and continuous dynamical systems. The biological content of the book is self contained and includes many basic biology topics such as the genetic code, Mendelian genetics, population dynamics, predator-prey relationships, epidemiology and immunology. The large number of problem sets include some drill problems along with a large number of case studies. The latter are divided into step by step problems and sorted into the appropriate section allowing readers to gradually develop complete investigations from understanding the biological assumptions to a complete analysis.
