Most major crime in this country emanates from two major data sources The FBI's Uniform Crime Reports has collected information on crimes known to the police and arrests from local and state jurisdictions throughout the country The National Crime Victimization Survey a general population survey designed to cover the extent nature and consequences of criminal victimization has been conducted annually since the early 1970s This workshop was designed to consider similarities and differences in the methodological problems encountered by the survey and criminal justice research communities and what might be the best focus for the research community In addition to comparing and contrasting the methodological issues associated with self report surveys and official records the workshop explored methods for obtaining accurate self reports on sensitive questions about crime events estimating crime and victimization in rural counties and townships and developing unbiased prevalence and incidence rates for rate events among population subgroups

How Crime in the United States is Measured Nathan James, Logan Rishard, 2008 Crime data collected through the Uniform Crime Reports UCR the National Incident Based Reporting System NIBRS and the National Crime Victimization Survey NCVS are used by Congress to inform policy decisions and allocate federal criminal justice funding to states As such it is important to understand how each program collects and reports crime data and the limitations associated with the data This book reviews 1 the history of the UCR the NIBRS and the NCVS 2 the methods each program uses to collect crime data and 3 the limitations of the data collected by each program The book then compares the similarities and differences of UCR and NCVS data It concludes by reviewing issues related to the NIBRS and the NCVS The UCR represents the first effort to create a national standardised measure of the incidence of crime It was conceived as a way to measure the effectiveness of local law enforcement and to provide law enforcement with data that could be used to help fight crime UCR data are now used extensively by researchers government officials and the media for research policy and planning purposes The UCR also provides some of the most commonly cited crime statistics in the United States The UCR reports offence and arrest data for 8 different Part I offences and arrest data for 21 different Part II offences The NIBRS was developed by the Federal Bureau of Investigation to respond to the law enforcement community's belief that the UCR needed to be updated to provide more in depth data to meet the needs of law enforcement into the 21st century The NIBRS collects data including data on offence's offender's victim's arrestee's and any property involved in an offence for 46 different Group A offences and 11 different Group B offences Despite the more detailed crime data that the NIBRS can provide nation wide implementation of the program has been slow for a variety of reasons including cost considerations The NCVS is the primary source of information on the characteristics of criminal victimisation and on the number and types of crime not reported to law enforcement The NCVS has four major objectives 1 to develop detailed information about the victims and consequences of crime 2 to estimate the number and types of crimes not reported to police 3 to provide uniform measures of selected types of crimes and 4 to permit comparisons over time and population type e g urban suburban and

rural The NCVS asks respondents whether they have been the victim of rape and sexual assault robbery simple and aggravated assault purse snatching pick pocketing burglary theft or motor vehicle theft In addition to collecting data on the number of victimisations the NCVS gathers data on the details of each incident of victimisation **Measuring Crime** Patsy A. Klaus,1981 **Drugs and Crime in Public Housing** Terence Dunworth,1994 *The Annals of the American Academy of Political and Social Science* ,1897 Measuring Crime and Delinquency Over the Life Course Alex R. Piquero,Terence P. Thornberry,Marvin D. Krohn,Alan J. Lizotte,Nicole Leeper Piquero,2014-03-28 Measuring Crime and Delinquency Over the Life Course presents one of the most detailed analyses of the longitudinal pattern of crime and delinquency using data from one of the most famous longitudinal studies ever conducted in the field the Rochester Youth Development Study as well as complimentary data on offending from both official and self report records Never before has such information been presented with a specific focus on changes in offending patterns between adolescence and adulthood among individuals differentiated by race and gender This project will undertake a replication of the classic Hindelang Hirschi and Weis 1981 book Measuring Delinquency Aside from replicating key chapters the proposed project will move beyond this previous work in three important ways 1 it will present a comparison of both self report and official records of offending among the same persons 2 it will extend the previous analyses by also conducting race ethnic comparisons specifically by including Hispanics as well as conducting gender comparisons and 3 it will examine whether self report estimates of offending at a previous time period relate to official records of offending at a later time period The authors of this book are among the leading life course criminologists in the world and their collective theoretical methodological statistical and policy expertise will make this book one of the key readings in criminology generally and life course criminology in particular **Queensland Past and Present** Thornhill Weedon,1898 P 10 11 Includes notes on foods and physical description of North Queensland Aborigines
