Handbook of Computable General Equilibrium Modeling Peter B. Dixon,Dale Jorgenson,2012-12-04 Top scholars synthesize and analyze scholarship on this widely used tool of policy analysis in 27 articles setting forth its accomplishments difficulties and means of implementation Though CGE modeling does not play a prominent role in top U S graduate schools it is employed universally in the development of economic policy This collection is particularly important because it presents a history of modeling applications and examines competing points of view Presents coherent summaries of CGE theories that inform major model types Covers the construction of CGE databases model solving and computer assisted interpretation of

results Shows how CGE modeling has made a contribution to economic policy **Ibss: Economics: 1999** Compiled by the British Library of Political and Economic Science,2000-12-07 IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge of the social sciences

Mathematical Modeling in Economics, Ecology and the Environment Natali Hritonenko,Yuri Yatsenko,2014-01-08 Updated to textbook form by popular demand this second edition discusses diverse mathematical models used in economics ecology and the environmental sciences with emphasis on control and optimization It is intended for graduate and upper undergraduate course use however applied mathematicians industry practitioners and a vast number of interdisciplinary academics will find the presentation highly useful Core topics of this text are Economic growth and technological development Population dynamics and human impact on the environment Resource extraction and scarcity Air and water contamination Rational management of the economy and environment Climate change and global dynamics The step by step approach taken is problem based and easy to follow The authors aptly demonstrate that the same models may be used to describe different economic and environmental processes and that similar investigation techniques are applicable to analyze various models Instructors will appreciate the substantial flexibility that this text allows while designing their own syllabus Chapters are essentially self contained and may be covered in full in part and in any order Appropriate one and two semester courses include but are not limited to Applied Mathematical Modeling Mathematical Methods in Economics and Environment Models of Biological Systems Applied Optimization Models and Environmental Models Prerequisites for the courses are Calculus and preferably Differential Equations

Integrated Assessment of Water Resources and Global Change Eric Craswell, Mike Bonnell, Deborah Bossio, Siegfried Demuth, Nick van de Giesen,2007-04-05 This book presents papers from an international conference held in Bonn Germany in February 2005 that dealt with integrated water resources management in industrialized and developing countries The papers detail such emerging concepts as blue and green water virtual water the water footprints of nations multi agent modeling linkages between water and biodiversity and social learning and adaptive management *Hybrid Solutions for the Modelling of Complex Environmental Systems* Christian E. Vincenot, Stefano Mazzoleni, Lael Parrott, 2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as

[Navigating the Complexity Across the Peace-Sustainability-Climate Security Nexus](#) Bernard Amadei,2023-11-28 Promoting peace and sustainability in human development while accounting for the risks associated with the impact of climate change on society has become more imperative than ever when addressing humanity s challenges of the twenty first century There is enough evidence that peace sustainability and climate security are entangled with multiple complex interactions and cannot be dealt with in isolation and independently from the environment and the numerous systems with which they interact Yet the intersection of peace sustainability and climate security or their opposites i e conflict unsustainability and climate vulnerability is rarely articulated with a systemic mindset A multi solving nexus approach is more appropriate to capture the complexity and uncertainty of how the three sectors of peace sustainability and climate security play a role in community development the nature of their causal chains and the feedback on how community development affects the three sectors Navigating the Complexity Across the Peace Sustainability Climate Security Nexus explores the value proposition of using a systems approach methodology and tools to comprehend and model that dynamic Features of the book Explores the interaction between the different components of peace and the relationship between peace sustainability and climate security using semi qualitative and quantitative tools Explains how climate adaptation and mitigation are related to peace or conflict Presents generic system dynamics modeling that can be used in different contexts *Agrekon* ,2003 **A Systems Approach to Modeling the Water-Energy-Land-Food Nexus, Volume II** Bernard Amadei,2019-02-13 This two volume book describes a flexible and adaptive system based methodology and associated guidelines for the management and allocation of community based WELF resources Over the next 50 years rapid population urbanization and economic growth worldwide will create unprecedented demands for water energy land and

food WELF resources The discussion on how to meet human needs for WELF resources and how to guarantee their respective securities has changed over time from looking at all four sectors in isolation to understanding their interdependency through the so called WELF nexus The approach presented in this book responds to the overall agreement in the WELF nexus literature that the management and allocation of WELF resources at the community level need to be examined in a more systemic multidisciplinary participatory and practical manner while seeking to increase synergies and reduce trade offs This book was written to explore the value proposition of that approach This two volume book describes a flexible and adaptive system based methodology and associated guidelines for the management and allocation of community based WELF resources Volume 1 focuses on defining the landscape in which the nexus operates and outlines the proposed methodology Volume 2 explores the quantitative and qualitative modeling of the nexus and landscape using system modeling tools including system dynamics It presents a road map for the formulation simulation selection and ranking of possible intervention plans The proposed methodology is designed to serve as a guide for different groups involved in the science and policy decision aspects of the WELF nexus within the context of community development The methodology focuses mostly on WELF related issues in small scale and low income communities where securing resources is critical to their short and long term livelihood and development

Integrated Modelling of Ecosystem Services and Land-Use Change Youjia Liang,Lijun Liu,Jiejun Huang,2019-10-17 This book presents essential case studies on the integrated modelling of ecosystem services and land use change in the field of landscape ecology The case studies were mainly conducted in the Zhangye oasis of the Hexi corridor and the upper reaches of the Heihe river basin including Loess plateau for wind power and the inland waterways of the Yangtze River for the regulation of extreme events The book puts forward an integrated modelling method including human activities natural processes land use change and ecosystem management and explores multiple scenarios based on the interests of local managers and their implications for ecosystem services As the book demonstrates the integrated modelling method for ecosystem services and land use change can serve as a valuable tool for gauging the impact of various development scenarios in this study area and in other regions with similar characteristics In addition numerous charts and diagrams are included in each chapter facilitating the simulation and assessment of specific land use change impacts on ecosystem services in various study areas

Modelling Global Change Marco Janssen,1998 Integrated assessment modelling is an active and rapidly developing field triggered by the debate on climate change and the move towards the goal of sustainable development This book provides an integrated approach to modelling using a transdisciplinary approach The author summarizes the main issues involved in the changing global system and gives an overview of the emerging field of integrated assessment He then presents a general discussion of the methodological principles of a multidisciplinary integrated modelling approach Existing tools are examined and new methodological approaches are applied to various aspects of the problem of global change The case studies focus on optimizing climate change mitigating policies the

allocation of emission rights and the adaptive behaviour of social and biological agents. Special attention is given to the role of uncertainty especially the subjective interpretation of uncertainties, world views and the role of adaptive multi agent modelling. The book concludes with a discussion on future uses of integrated assessment modelling in the global environment. Modelling Global Change will be vital to economists and scientists who have an interest in integrated assessment modelling, global modelling and decision support environmental and ecological economists and those interested in sustainable development. *The Forestry Chronicle*, 2001 *Environmental Systems and Economics* Alexander Karmann, 1994

Nishioka, Shūzō Nishioka, Hiroyuki

Tamura, 2002 Environmental issues is one of the significantly important subjects to be solved on a global scale for attaining sustainable developments in the new century. A major feature of environmental issues is that studies on environments are interdisciplinary and should deal with complex and heterogeneous systems which include chemical, physical and biological phenomena and further socio economical activities and technology developments for energy saving and CO₂ emission reduction. The workshop provided the forum for presentation of new developments in the important interdisciplinary field of environmental systems involving the application of concepts, methods and techniques of modeling and control. The aim was to review state of the art systems and control approaches, exchange new results in interdisciplinary fields and look at feasible developments to the future. The scope of this workshop covered various aspects of systems and control approaches to environmental issues. Environmental assessment Systems approaches to environmental management and strategies. Modeling of global warming and impact analysis on socio structure. Modeling of ecological systems. Control and optimization of environmental quantities. System reform and integration for environments. Advanced control technology for reduction of energy consumption and CO₂ emission. Cogeneration systems. Control systems approaches to clean energy. Fuel cells and their applications. Systems Integration technologies in urban planning. Systems modeling and data analysis in life cycle assessment. Manufacturing in symbiosis with environments. Modeling and control of waste incineration plant. Water quality control and waste water management. Other related topics. *Economic-environmental Modeling in a National-regional System* Wilhelmus A.
