Optics and Information Theory Francis T. S. Yu,1976    Entropy and Information Optics Francis T.S. Yu,2017-11-28 This book shows there is a profound connection between information and entropy Without this connection information would be more difficult to apply to science This book covers the connection and the application to modern optics and radar imaging It shows that there exists a profound relationship between Einstein s relativity theory and Schr inger s quantum mechanics by means of the uncertainty principle In due of the uncertainty relation this book shows that every bit of information takes time and energy to transfer to create and to observe The new edition contains 3 new chapters on radar imaging with optics science in the myth of information and time and the enigma of space    Fundamentals of Quantum Optics and Quantum Information Peter Lambropoulos,David Petrosyan,2007-01-30 Another book on Quantum Optics or Quantum Information Well not actly A more descriptive title might be A guided tour through basic qu tum mechanics quantum optics and quantum information Even better a few words on its origin and our motivation for undertaking the task might be useful to the potential reader in deciding whether to turn the pages beyond this preface For more than ten years now a graduate course on quantum optics has been taught in the physics department of the University of Crete Spanning two semesters it originally consisted of a collection of topics representative of what can be found in the numerous by now excellent books on quantum optics Over the last four years or so however the course acquired a gradually increasing segment of what is broadly referred to as quantum information whichatthispointisapproximatelyhalfofthematerial Inevitably thetopics on standard quantum optics had to be reduced or compressed accordingly    Entropy and Information Optics Francis T.S. Yu,2000-03-17 Identifies the relationship between entropy and information optics as the impetus for the research and development of high speed high data rate and high capacity communication systems Examines computing pattern recognition and wavelet transformation

**Lectures on Quantum Information** Dagmar Bruss,Gerd Leuchs,2007 Quantum Information Processing is a young and rapidly growing field of research at the intersection of physics mathematics and computer science Its ultimate goal is to harness quantum physics to conceive and ultimately build quantum computers that would dramatically overtake the capabilities of today s classical computers One example of the power of a quantum computer is its ability to efficiently find the prime factors of a larger integer thus shaking the supposedly secure foundations of standard encryption schemes This comprehensive textbook on the rapidly advancing field introduces readers to the fundamental concepts of information theory and quantum entanglement taking into account the current state of research and development It thus covers all current concepts in quantum computing both theoretical and experimental before moving on to the latest

implementations of quantum computing and communication protocols With its series of exercises this is ideal reading for students and lecturers in physics and informatics as well as experimental and theoretical physicists and physicists in industry Dagmar Bru graduated at RWTH University Aachen Germany and received her PhD in theoretical particle physics from the University of Heidelberg in 1994 As a research fellow at the University of Oxford she started to work in quantum information theory Another fellowship at ISI Torino Italy followed While being a research assistant at the University of Hannover she completed her habilitation Since 2004 Professor Bru has been holding a chair at the Institute of Theoretical Physics at the Heinrich Heine University Düsseldorf Germany Gerd Leuchs studied physics and mathematics at the University of Cologne Germany and received his Ph D in 1978 After two research visits at the University of Colorado in Boulder USA he headed the German gravitational wave detection group from 1985 to 1989 He became technical director at Nanomach AG in Switzerland Since 1994 Professor Leuchs has been holding the chair for optics at the Friedrich Alexander University of Erlangen Nuremberg Germany His fields of research span the range from modern aspects of classical optics to quantum optics and quantum information Since 2003 he has been Director of the Max Planck Research Group for Optics Information and Photonics at Erlangen    **Circular of Information** University of Chicago,1919    *Journal of the Optical Society of America* Optical Society of America,1924 Separately paged supplements accompany a few issues    Transactions of the I.R.E.
