Optimal Syntheses For Control Systems On 2d Manifolds:

Optimal Syntheses for Control Systems on 2-D Manifolds Ugo Boscain, Benedetto Piccoli, 2003-11-26 This book is devoted to optimal syntheses in control theory and focuses on minimum time on 2 D manifolds The text outlines examples of applicability introduces geometric methods in control theory and analyzes single input systems on 2 D manifolds including classifications of optimal syntheses and feedbacks their singularities extremals projection and minimum time singularities Various extensions and applications are also illustrated

Geometric Control Theory and Sub-Riemannian Geometry

Gianna Stefani, Ugo Boscain, Jean-Paul Gauthier, Andrey Sarychev, Mario Sigalotti, 2014-06-05 Honoring Andrei Agrachev's 60th birthday this volume presents recent advances in the interaction between Geometric Control Theory and sub Riemannian geometry On the one hand Geometric Control Theory used the differential geometric and Lie algebraic language for studying controllability motion planning stabilizability and optimality for control systems The geometric approach turned out to be fruitful in applications to robotics vision modeling mathematical physics etc On the other hand Riemannian geometry and its generalizations such as sub Riemannian Finslerian geometry etc have been actively adopting methods developed in the scope of geometric control Application of these methods has led to important results regarding geometry of sub Riemannian spaces regularity of sub Riemannian distances properties of the group of diffeomorphisms of sub Riemannian manifolds local geometry and equivalence of distributions and sub Riemannian structures regularity of the Hausdorff volume etc

Taming Heterogeneity and Complexity of Embedded Control

Françoise Lamnabhi-Lagarrigue, Antonio Loria, Elena Panteley, Salah Laghrouche, 2013-05-21 This book gathers together a selection of papers presented at the Joint CTS HYCON Workshop on Nonlinear and Hybrid Control held at the Paris Sorbonne France 10-12 July 2006 The main objective of the Workshop was to promote the exchange of ideas and experiences and reinforce scientific contacts in the large multidisciplinary area of the control of nonlinear and hybrid systems

SIAM Journal on Control and Optimization Society for Industrial and Applied Mathematics, 2009

Nonlinear Synthesis C.I. Byrnes, A.B. Kurzhanski, 2013-03-09 In its broadest sense nonlinear synthesis involves in fact the synthesis of sometimes so sophisticated or complex control strategies with the aim of prescribing or at least influencing the evolution of complex nonlinear systems Nonlinear synthesis requires the development of methodologies for modeling complex systems for the analysis of nonlinear models and for the systematic design of control schemes or feedback laws which can achieve a wide variety of prescribed objectives The modeling analysis and control of complex systems in the face of uncertainty form one of the major components of the current research program in the Department of Systems and Decision Sciences SDS at the International Institute for Applied Systems Analysis IIASA In June 1989 a IIASA workshop on Nonlinear Synthesis sponsored by SDS was held in Sopron Hungary We are proud to present this volume as the proceedings of this workshop a workshop attended by prominent researchers in nonlinear systems from both the East and the West Since the promotion and encouragement of scientific

cooperation between researchers in the East and in the West is one of the goals at IIASA we feel the Sopron Conference on Nonlinear Synthesis was very successful Moreover we were especially pleased by the impressive new advances presented at the workshop which in this volume are now part of the conference record
