Optimal Spatial Interaction And The Gravity Model:

Optimal Spatial Interaction and the Gravity Model F. Svenaesus, 2014-03-12 This book has grown out of a desire to explore the possibilities of using optimizing models in transportation planning This approach has been followed throughout Models which combine descriptive and optimizing elements are not treated The gravity model is here studied as the solution to an optimizing model In spite of this approach much of the material should be of general interest Algorithms are not discussed The author has benefited from discussions with many colleagues M Florian suggested the term interactivity N F Stewart and P Smeds gave many valuable comments on a first draft M Beckmann made me think once more about the final chapters R Grubbstrom and K Jornsten helped clarifying some things in the same chapters Remaining insufficiencies are due to the author Gun Mannervik typed with great patience Linkoping in October 1979 Sven Erlander
ABSTRACT The book proposes extended use of optimizing models in transportation planning An entropy constrained linear program for the trip distribution problem is formulated and shown to have the ordinary doubly constrained gravity model as its solution Entropy is here used as a measure of interactivity which is constrained to be at a prescribed level In this way the variation present in the reference trip matrix is preserved The properties of entropy as a dispersion measure are shortly discussed The detailed mathematics of the optimal solutions as well as of sensitivity and duality are given

Optimal spatial interaction and the gravity model Sven Erlander, 1980 Gravity and Spatial Interaction Models Kingsley E. Haynes, A. Stewart Fotheringham, 1984-07 Haynes and Fotheringham provide an introduction to gravity and spatial interaction models which are extensively applied in forecasting They trace the different applications of the gravity model to market area analysis developing real life examples of the use of these models planning a

new service defining retail shopping boundaries forecasting migration and voting patterns examining university enrollment by area determining the optimal size of a shopping complex and locating a facility for best results

Gravity Models of Spatial Interaction Behavior Ashish Sen, Tony E. Smith, 2012-12-06 Gravity models describe and hence help predict spatial flows of commuters air travelers migrants commodities and even messages They are one of the oldest and most widely used of all social science models This book presents an up to date consistent and unified approach to the theory methods and application of the gravity model which spans from the axiomatic foundations of such models all the way to practical hints for their use I have found no better general method for use in applied research dealing with spatial interaction It is against this background that the present book by Sen and Smith is most welcomed Walter Isard Optimization: Techniques And Applications (Icota '95) G Z Liu, 1995-09-01 With the advent of powerful computers and novel mathematical programming techniques the multidisciplinary field of optimization has advanced to the stage that quite complicated systems can be addressed The conference was organized to provide a platform for the exchange of new ideas and information and for identifying needs for future research The contributions covered both theoretical techniques and a rich variety of case studies to which optimization can be usefully applied

Fifty Years of Regional Science Raymond Florax, David A. Plane, 2013-04-17 This book contains the complete text of the special Golden Anniversary issue of the flagship journal of the Regional Science Association International RSAI Papers in Regional Science Volume 83 Number 1 as well as the full text of Walter Isard s Presidential Address The future near and far of regional science Professor Isard originally delivered the speech in a special plenary session of the fiftieth North American Meetings of the Regional Science Association International The session began with a ceremonial kickoff to the year long celebration of the multidisciplinary field s first 50 years At the ceremony held on the morning of Friday November 21 2004 at the DoubleTree Hotel in Philadelphia we presented Walter Isard the founder of our multidisciplinary field as well as Antoine Bailly the President of the Regional Science Association International and David Boyce the Association s Archivist with commemorative first copies of the anniversary issue This book entitled Fifty Years of Regional Science consists of a compendium of thought papers authored by a representative sampling of some of the field s leading scholars For the special journal issue we originally titled the collection The Brightest of Dawns

Nondifferentiable Optimization: Motivations and Applications Vladimir F. Demyanov,Diethard Pallaschke,2013-06-29

The International Institute for Applied Systems Analysis IIASA in Laxenburg Austria has been involved in research on nondifferentiable optimization since 1976 IIASA based East West cooperation in this field has been very productive leading to many important theoretical algorithmic and applied results Nondifferentiable optimi zation has now become a recognized and rapidly developing branch of mathematical programming To continue this tradition and to review recent developments in this field IIASA held a Workshop on Nondifferentiable Optimization in Sopron Hungary in September 1964 The aims of the Workshop were

- 1 To discuss the state of the art of nondifferentiable optimization NDO its origins and motivation
- 2 To compare various algorithms
- 3 To evaluate existing mathematical approaches their applications and potential
- 4 To extend and deepen industrial and other applications of NDO

The following topics were considered in separate sessions

- General motivation for research in NDO
- nondifferentiability in applied problems
- nondifferentiable mathematical models
- Numerical methods for solving nondifferentiable optimization problems
- numerical experiments
- comparisons and software
- Nondifferentiable analysis
- various generalizations of the concept of subdifferen tials
- Industrial and other applications

This volume contains selected papers presented at the Workshop It is divided into four sections based on the above topics

- I Concepts in Nonsmooth Analysis
- II Multicriteria Optimization and Control Theory
- III Algorithms and Optimization Methods
- IV Stochastic Programming and Applications

We would like to thank the International Institute for Applied Systems Analysis particularly Prof V Kaftanov and Prof A B Kurzhanski for their support inorganiz ing this meeting

Planning Models Aura Reggiani,Kenneth Button,Peter Nijkamp,2006 While planning involves seeking ways of influencing future behavior it is important to have at the outset an abstraction of the world upon which to base an assessment of outcomes The papers in this collection represent some of the major works in the field of planning models with land use planning as a core theme The collection is divided into several parts Part 1 focuses on location models and embraces a series of classic survey papers as well as a number of more specific contributions covering such topics as the distribution of residential activities This is followed in part 2 by papers concerned with spatial interaction and in particular the gravity model Part 3 of the collection contains papers on micro macro models that look at ways of moving from individual to collective behavior whilst part 4 is concerned with dynamic models Part 5 of the volume reflects an increasing interest in the role of various networks in the formulation of plans and finally part 6 completes the volume with a selection of policy planning models

Optimization, Parallel Processing, and Applications A. B. Kurzhanskiĭ,Klaus Neumann,Diethard Pallaschke,1988 This volume contains selected papers presented either at the Oberwolfach Conference on Operations Research February 1987 or

at the three day workshop on Advanced Computation Techniques Parallel Processing and Optimization organized by IIASA and the University of Karlsruhe which immediately followed The aim of the conferences was to discuss recently developed methods in optimization theory and their practical implementation using advanced computation techniques especially in parallel processing The volume is divided into five sections I Algorithms and Optimization Methods II Optimization and Parallel Processing III Graph Theory and Scheduling IV Differential Equations and Operator Theory V Applications

Simplicial Algorithms on the Simplotope Timothy Doup, 1988-09-14 This monograph deals with simplicial algorithms on the unit simplex and on the simplotope Several new triangulations are introduced underlying the simplicial algorithms The V triangulation underlies a number of new simplicial algorithms and also underlies a continuous deformation algorithm on the simplotope The monograph extensively discusses these algorithms and gives computational comparisons The examples include exchange economies quadratic programming non cooperative N person games and economies with a block diagonal supply demand pattern In the economic examples the paths induced by the algorithms can be interpreted as price adjustment processes These paths have the attractive feature that they always converge to an optimal solution **SIAM Journal on Algebraic and Discrete Methods** Society for Industrial and Applied Mathematics, 1981 **An Index and Other Useful Information, 501-1000** Albrecht Dold, Beno Eckmann, 1984 Acta Scientiarum Mathematicarum, 1982 *Integer Programming and Related Areas* Universität Bonn.
