Optimization Methods For Logical Inference:

Optimization Methods for Logical Inference Vijay Chandru,John Hooker,2011-09-26 Merging logic and mathematics in deductive inference an innovative cutting edge approach Optimization methods for logical inference Absolutely say Vijay Chandru and John Hooker two major contributors to this rapidly expanding field And even though solving logical inference problems with optimization methods may seem a bit like eating sauerkraut with chopsticks it is the mathematical structure of a problem that determines whether an optimization model can help solve it not the context in which the problem occurs Presenting powerful proven optimization techniques for logic inference problems Chandru and Hooker show how optimization models can be used not only to solve problems in artificial intelligence and mathematical programming but also have tremendous application in complex systems in general They survey most of the recent research from the past decade in logic optimization interfaces incorporate some of their own results and emphasize the types of logic most receptive to optimization methods propositional logic first order predicate logic probabilistic and related logics logics that combine evidence such as Dempster Shafer theory rule systems with confidence factors and constraint logic programming systems Requiring no background in logic and clearly explaining all topics from the ground up Optimization Methods for Logical Inference is an invaluable guide for scientists and students in diverse fields including operations research computer science artificial intelligence decision support systems and engineering **Boolean Models and Methods in Mathematics, Computer Science, and Engineering** Yves Crama,Peter L. Hammer,2010-06-28 A collection of papers written by prominent experts that examine a variety of advanced topics related to Boolean functions and expressions **Logic-Based Methods for Optimization** John Hooker,2011-09-28 A pioneering look at the fundamental role of logic in optimizationand constraint satisfaction While recent efforts to combine optimization and constraintsatisfaction have received considerable attention little has beensaid about using logic in optimization as the key to unifying thetwo fields Logic Based Methods for Optimization develops for thefirst time a comprehensive conceptual framework for integratingoptimization and constraint satisfaction then goes a step furtherand shows how extending logical inference to optimization allowsfor more powerful as well as flexible modeling and solutiontechniques Designed to be easily accessible to industryprofessionals and academics in both operations research andartificial intelligence the book provides a wealth of examples aswell as elegant techniques and modeling frameworks ready forimplementation Timely original and thought provoking Logic Based Methods for Optimization Demonstrates the advantages of combining the techniques inproblem solving Offers tutorials in constraint satisfaction constraintprogramming and logical inference Clearly explains such concepts as relaxation cutting planes nonserial dynamic programming and Bender s decomposition Reviews the necessary technologies for software developersseeking to combine the two techniques Features extensive references to important computationalstudies And much more *Logic-Based Methods for Optimization* John Hooker,2000-05-30 Logic Based Methods for Optimization develops for the first time a

comprehensive conceptual framework for integrating optimization and constraint satisfaction then goes a step further and shows how extending logical inference to optimization allows for more powerful as well as flexible modeling and solution techniques Designed to be easily accessible to industry professionals and academics in both operations research and artificial intelligence the book provides a wealth of examples as well as elegant techniques and modeling frameworks ready for implementation BOOK JACKET **Office of Naval Research Guide to Programs** United States. Handbook of Satisfiability Armin Biere,Hans van Maaren,Toby Walsh,2009-01-15 Satisfiability SAT related topics have attracted researchers from various disciplines logic applied areas such as planning scheduling operations research and combinatorial optimization but also theoretical issues on the theme of complexity and much more they all are connected through SAT My personal interest in SAT stems from actual solving The increase in power of modern SAT solvers over the past 15 years has been phenomenal It has become the key enabling technology in automated verification of both computer hardware and software Bounded Model Checking BMC of computer hardware is now probably the most widely used model checking technique The counterexamples that it finds are just satisfying instances of a Boolean formula obtained by unwinding to some fixed depth a sequential circuit and its specification in linear temporal logic Extending model checking to software verification is a much more difficult problem on the frontier of current research One promising approach for languages like C with finite word length integers is to use the same idea as in BMC but with a decision procedure for the theory of bit vectors instead of SAT All decision procedures for bit vectors that I am familiar with ultimately make use of a fast SAT solver to handle complex formulas Decision procedures for more complicated theories like linear real and integer arithmetic are also used in program verification Most of them use powerful SAT solvers in an essential way Clearly efficient SAT solving is a key technology for 21st century computer science I expect this collection of papers on all theoretical and practical aspects of SAT solving will be extremely useful to both students and researchers and will lead to many further advances in the field Edmund Clarke FORE Systems University Professor of Computer Science and Professor of Electrical and Computer Engineering at Carnegie Mellon University winner of the 2007 A M Turing Award *Frontiers of Combining Systems* Helene Kirchner,Christophe Ringeissen,2000-03-15 This book constitutes the refereed proceedings of the Third International Workshop on Frontiers of Combining Systems FroCoS 2000 held in Nancy France in March 2000 The 14 revised full papers presented together with four invited papers were carefully reviewed and selected from a total of 31 submissions Among the topics covered are constraint processing interval narrowing rewriting systems proof planning sequent calculus type systems model checking theorem proving declarative programming logic programming and equational theories **Gcmm 2004** Prasad K.
