## **Nature Study And Science:**

*Teaching Children Science* Sally Gregory Kohlstedt, 2010-05-15 In the early twentieth century a curriculum known as nature study flourished in major city school systems streetcar suburbs small towns and even rural one room schools This object based approach to learning about the natural world marked the first systematic attempt to introduce science into elementary education and it came at a time when institutions such as zoos botanical gardens natural history museums and national parks were promoting the idea that direct knowledge of nature would benefit an increasingly urban and industrial nation The definitive history of this once pervasive nature study movement *Teaching Children Science* emphasizes the scientific pedagogical and social incentives that encouraged primarily women teachers to explore nature in and beyond their classrooms Sally Gregory Kohlstedt brings to vivid life the instructors and reformers who advanced nature study through on campus schools summer programs textbooks and public speaking Within a generation this highly successful hands on approach migrated beyond public schools into summer camps afterschool activities and the scouting movement Although the rich diversity of nature study classes eventually lost ground to increasingly standardized curricula Kohlstedt locates its legacy in the living plants and animals in classrooms and environmental field trips that remain central parts of science education today

[The Nature-study Review](#) , 1919    **Nature Study and Science** Gilbert H. Trafton, 2015-06-24 Excerpt from *Nature Study and Science* The increasing importance of science in modern life is naturally compelling the study of more science in our schools For a number of years considerable attention has been paid to science in the high schools In recent years general science has found its way quite universally into the junior high school where it is taught chiefly in the last year the ninth grade There are indications here and there that eventually it will be spread out over the seventh and eighth grades also and made into a three year course The next logical step will be the introduction of more science into the intermediate grades which feel above them the stimulation of the general science work being done in the junior high school and below them the urge of the nature study work being done in the primary grades The intermediate grades must bridge the gap between these two extremes by working out a course that will contain elements from both movements harmonize them and advance the child from the simple nature study interest to the interest in useful and applied scientific knowledge In past years the tendency in the intermediate grades has been to emphasize too much the study of the plants and animals and to neglect the physical sciences About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works    **Nature Science Series: Nature study** B. Clark, George O. Hendrickson, 1934 A series of nature study workbooks [The Nature-Study Idea](#) Liberty Hyde Bailey, 2024-01-15 In The Nature Study Idea Liberty Hyde Bailey articulated the essence of a social movement led by ordinary public school teachers that lifted education out of the classroom and placed it into firsthand contact with the natural world. The aim was simple but revolutionary: sympathy with nature to increase the joy of living and foster stewardship of the earth. With this definitive edition John Linstrom reintroduces The Nature Study Idea as an environmental classic for our time. It provides historical context through a wealth of related writings and introductory essays relate Bailey's vision to current work in education and the intersection of climate change and culture. In this period of planetary turmoil Bailey's ambition to cultivate wonder in adults as well as children and lead readers back into the natural world is more important than ever.

**An Introduction to Nature-study** Ernest Stenhouse, 1903 [Nature Study and Science](#) Irene Finch, 1971 [The Nature-study Idea](#) Liberty Hyde Bailey, 1909 **Science** John Michels (Journalist), 1925 [The Nature-Study Review, Vol. 1](#) American Nature Study Society, 2016-06-28 Excerpt from The Nature Study Review Vol 1 Devoted to All Phases of Nature Study in Elementary Schools January 1905 For the first four years of school that is throughout the primary period nature study and geography are practically identical. Theoretically however we may distinguish home lore from a geographic treatment of the home and its surroundings. Above the fourth grade nature study and geography diverge in practice although to make the most of both subjects lessons in one should be arranged as far as possible with reference to lessons in the other. Nature study calls for action on the part of the pupil. He should discover the meaning of facts for himself and not ordinarily go to the teacher or to books. His own experience should form the basis of what he acquires. About the Publisher: Forgotten Books publishes hundreds of thousands of rare and classic books. **The Art of Teaching Science** Jack Hassard, 2005 This is a core teaching textbook designed for the professional development of middle and high school science teachers. Differing from other texts in its constructivist approach to learning and teaching, it provides meaningful learning experiences and connections with the most recent research and understanding of science teaching. Each chapter is organized into two sections: the first focuses on the content of the major theme of the chapter while the second consists of a newspaper-like feature called 'The Science Teaching Gazette' containing a variety of strategies for extending the learning process. Packed with learning tools, hands-on inquiry activities, case studies, think pieces, and interviews with teachers around the world, this is a remarkably comprehensive textbook designed to prepare a new cadre of science teachers.

**Technology, Science Teaching, and Literacy** Kenneth P. King, 2005-12-27 This book deals with the use of technology in science teaching. The author is not nor has ever had an intention of being a techie. Rather, I spent the first decade of my professional life as a high school physics teacher, making occasional uses of technology to further student understanding and to automate my own teaching practices. During my graduate work, my interest in the use of technology continued, catalyzed to some extent by the increasing availability of graphical interfaces for computers. The realization struck that the computer was more and more becoming a tool that all teachers could use to support their teaching practice, not simply those with a passion for the technology itself. The rapid changes in the hardware and software available, however, frequently caused me to reflect on the usefulness of technology: if it were to change at such a rapid pace, would anyone save for those who diligently focused on the development of these tools, be able to effectively use technology in science teaching? Was change too rapid to yield a useful tool for teachers? To address this interest, I examined the nature of science teaching during this century, using the equally fluid notion of scientific literacy which formed the organizing principle for this study. The result is an examination of how technology was used to accomplish this goal of producing scientifically literate citizens. What was observed is that technology indeed consistently came to the service of teachers as they attempted to achieve this goal.

**Guide to Nature-Study** Mattie Rose Crawford,2015-07-13  
Excerpt from Guide to Nature Study For the Use of Teachers The author has undertaken this work in the hope that it may be helpful to those teachers who are struggling in what to them is a comparatively new field of study It is hoped that those who have not yet taken advantage of the opportunities which Nature study affords may be induced to consider the benefits of this subject to the pupil and to the general work of the school The general purpose of the book is to set forth the true aim of Nature study and thus to lay the foundation for correct methods in conducting it In this it will be noted that emphasis is placed on the education of the child through his self activity and by and through the realities of nature Part I deals with the Pedagogics of Nature study It endeavors to show that the best education can be obtained not by studying man alone his history language and literature nor by studying natural science alone but by taking a stand as it were midway between them and uniting the two In other words it is to be obtained by studying man in relation to his environment physical intellectual and spiritual Nature study deals particularly with the child's physical environment and if properly conducted relates this environment to his intellectual and spiritual needs and thus gives him a higher conception of life Part II endeavors to show through type lessons the mode of dealing with different departments of nature and the method of correlating Nature study with the expressive work of the school drawing modelling composition literature and reading Individual rather than collective work is prominent at every step the how and why of the child are emphasized It will be readily seen that cram is impossible in true Nature lessons since many of the type questions will require months of observation before they can be answered Part III must not be regarded as Nature study About the Publisher Forgotten Books publishes hundreds of thousands of rare and
