## **Natures Enigma:**

**Nature's Enigma** Virginia Parker Dawson, 1987 Two striking discoveries made 1740 a turning point in the history of 18th century biology Charles Bonnet established that aphids could reproduce without male fertilization Shortly afterwards Abraham Trembley proved that a tiny aquatic animal the fresh water polyp or hydra could regenerate from cuttings like some plants The discovery of the polyp was important because of the disturbing metaphysical issues that it raised In their letters written during the decade of the 1740s to Reaumur the great French Academician both Trembley Bonnet referred to the polyp as an enigma Not only did it seem to present a new mode of animal reproduction previously unsuspected but it called into question the prevailing mechanistic view of animal biology brought into focus the problem of animal soul Drawing on some of the most illuminating letters from the private archives of the Trembley family this study focuses on the discovery of the polyp using the correspondence of Bonnet Trembley to understand their common Genevan background their possible differences in approach from that of Reaumur

**Darwin's Ghosts** Rebecca Stott, 2012-06-12 A NEW YORK TIMES NOTABLE BOOK An extraordinarily wide ranging and engaging book about the men who shaped the work of Charles Darwin a book that enriches our understanding of how the struggle to think new thoughts is shared across time and space and people The Sunday Telegraph London Christmas 1859 Just one month after the publication of *On the Origin of Species* Charles Darwin received an unsettling letter He had expected criticism in fact letters were arriving daily most expressing outrage and accusations of heresy But this letter was different It accused him of failing to acknowledge his predecessors of taking credit for a theory that had already been discovered by others Darwin realized that he had made an error in omitting from *Origin of Species* any mention of his intellectual forebears Yet when he tried to trace all of the natural philosophers who had laid the groundwork for his theory he found that history had already forgotten many of them Darwin's *Ghosts* tells the story of the collective discovery of evolution from Aristotle walking the shores of Lesbos with his pupils to Al Jahiz an Arab writer in the first century from Leonardo da Vinci searching for fossils in the mine shafts of the Tuscan hills to Denis Diderot in Paris exploring the origins of species while under the surveillance of the secret police and the brilliant naturalists of the Jardin de Plantes finding evidence for evolutionary change in the natural history collections stolen during the Napoleonic wars Evolution was not discovered single handedly Rebecca Stott argues contrary to what has become standard lore but is an idea that emerged over many centuries advanced by daring individuals across the globe who had the imagination to speculate on nature's extraordinary ways and who had the courage to articulate such speculations at a time when to do so was often considered heresy With each chapter focusing on an early evolutionary thinker Darwin's *Ghosts* is a fascinating account of a diverse group of individuals who despite the very real dangers of challenging a system in which everything was presumed to have been created perfectly by God felt compelled to understand where we came from Ultimately Stott demonstrates ideas including evolution itself evolve just as animals and plants do by intermingling toppling weaker notions

and developing over stretches of time Darwin's Ghosts presents a groundbreaking new theory of an idea that has changed our very understanding of who we are Praise for Darwin's Ghosts Absorbing Stott captures the breathless excitement of an investigation on the cusp of the unknown A lively original book The New York Times Book Review Stott's research is broad and unerring her book is wonderful An exhilarating romp through 2 000 years of fascinating scientific history Nature Stott brings Darwin himself to life She writes with a novelist's flair Darwin and the ghosts so richly described in Ms Stott's enjoyable book are the descendants of Aristotle and Bacon and the ancestors of today's scientists The Wall Street Journal Riveting Stott has done a wonderful job in showing just how many extraordinary people had speculated on where we came from before the great theorist dispelled all doubts The Guardian U K [William Bartram's Visual Wonders](#) Elizabeth A. Athens,2024-09-10 Pennsylvania naturalist William Bartram 1739 1823 is best known as the author of a travelogue describing his botanizing journey through the American South in the late eighteenth century Writing was not however Bartram's only or even preferred method of recording the natural world around him His deeply unconventional drawings depicting sentient plants and hybrid organic forms lie at the heart of his understanding of nature With this book Elizabeth Athens considers the strangeness of Bartram's graphic enterprise exploring the essential role his renderings played in his natural history For Bartram the making and interpretation of figures on a surface was a dynamic and collaborative relationship between nature the observing artist naturalist and the audience This book offers the first in depth investigation of Bartram's drawing practice as central to his understanding of nature Through an examination of Bartram's approach to botanical and zoological representation Athens highlights the struggle between different modes of seeing nature in eighteenth century Enlightenment science **Catching Nature in the Act** Mary Terrall,2014-04-16 Natural history in the eighteenth century was many things to many people diversion obsession medically or economically useful knowledge spectacle evidence for God's providence and wisdom or even the foundation of all natural knowledge Because natural history was pursued by such a variety of people around the globe with practitioners sharing neither methods nor training it has been characterized as a science of straightforward description devoted to amassing observations as the raw material for classification and thus fundamentally distinct from experimental physical science In *Catching Nature in the Act* Mary Terrall revises this picture revealing how eighteenth century natural historians incorporated various experimental techniques and strategies into their practice At the center of Terrall's study is Ren Antoine Ferchault de R aumur 1683 1757 the definitive authority on natural history in the middle decades of the eighteenth century and his many correspondents assistants and collaborators Through a close examination of R aumur's publications papers and letters Terrall reconstructs the working relationships among these naturalists and shows how observing collecting and experimenting fit into their daily lives Essential reading for historians of science and early modern Europe *Catching Nature in the Act* defines and excavates a dynamic field of francophone natural history that has been inadequately mined and understood to date [English Prose](#) Sir
