Institution of Naval Architects,1919 List of members in each volume **Design of Unmanned Aerial Systems** Mohammad H. Sadraey,2020-02-20 Provides a comprehensive introduction to the design and analysis of unmanned aircraft systems with a systems perspective Written for students and engineers who are new to the field of unmanned aerial vehicle design this

book teaches the many UAV design techniques being used today and demonstrates how to apply aeronautical science concepts to their design. Design of Unmanned Aerial Systems covers the design of UAVs in three sections: vehicle design, autopilot design and ground systems design, in a way that allows readers to fully comprehend the science behind the subject so that they can then demonstrate creativity in the application of these concepts on their own. It teaches students and engineers all about UAV classifications, design groups, design requirements, mission planning, conceptual design, detail design and design procedures. It provides them with in-depth knowledge of ground stations, power systems, propulsion systems, automatic flight control systems, guidance systems, navigation systems and launch and recovery systems. Students will also learn about payloads, manufacturing considerations, design challenges, flight software, microcontroller and design examples. In addition, the book places major emphasis on the automatic flight control systems and autopilots. Provides design steps and procedures for each major component. Presents several fully solved step by step examples at component level. Includes numerous UAV figures/images to emphasize the application of the concepts. Describes real stories that stress the significance of safety in UAV design. Offers various UAV configurations, geometries and weight data to demonstrate the real world applications and examples. Covers a variety of design techniques/processes such that the designer has freedom and flexibility to satisfy the design requirements in several ways. Features many end of chapter problems for readers to practice. Design of Unmanned Aerial Systems is an excellent text for courses in the design of unmanned aerial vehicles at both the upper division undergraduate and beginning graduate levels.
