Experimental Analysis of Behavior I.H. Iversen, K.A. Lattal, 2013-10-22 This volume is dedicated to the late B F Skinner
as a tribute to his pioneering work on the Experimental Analysis of Behavior This science that he initiated studies the
behavior of individual organisms under laboratory conditions The volume describes a broad collection of representative and
effective research techniques in the Experimental Analysis of Behavior techniques derived solely from infrahuman subjects
which have been selected both for their utility in behavior analysis and for their potential value in expanding the use of
behavior analysis in the neurosciences By bringing together under one cover the expertise of individual authors regarding
techniques based on their particular laboratory experiences the book provides an informative and practical source of
methods and techniques for those practising or interested in Experimental Analysis of Behaviour Encyclopedia of Medical

Computers and Information Processing World Index Suzan Deighton, John Gurnsey, Janet Tomlinson, 1984 **Eye
Movements and Their Role in Visual and Cognitive Processes** Eileen Kowler, 1990 This is the first book to deal
exclusively with oculomotor performance in a series that up to this point has been devoted largely to reviews of research on
oculomotor anatomy and physiology The publication of this volume signifies the recognition of the fact that a genuine
understanding of eye movement will not come about through the study of neurons alone We need to know about the capacity
to make different kinds of eye movement and about how such oculomotor capacity is used to accomplish different sorts of

visual and cognitive tasks i.e. how the eye can move and why it moves in particular ways Research on respective topics was critically evaluated by the contributing authors resulting in a controversial and up to date appraisal of this subject

Perception, 1979 **The Computer in Experimental Psychology** Richard J. Bird, 1981 This book is about the use of computers in experimental psychology Much of it deals with the application of real time computer systems to the carrying out of experiments in the laboratory and there are sections dealing with the concepts of computing underlying these application areas Chapters are also devoted to the subjects of data analysis and to the management of small computer systems and networks It is hoped therefore that with the exception of the subjects of artificial intelligence and the modeling of psychological processes which concern theoretical rather than experimental psychology the book presents a picture of the use of computers in experimental psychology as a whole National Union Catalog, Includes entries for maps and atlases
