Yuan,1965 Divine Flesh, Embodied Word Anne-Claire Mulder,2025-10-01 What has Luce Irigaray s statement that women need a God to do with her thoughts on the relation between body and mind or the sensible and the intelligible Using the theological notion incarnation as a hermeneutical key Anne Claire Mulder brings together and illuminates the interrelations between these different themes in Luce Irigaray s work Seesawing between Luce Irigaray s critique of philosophical discourse and her constructive philosophy Mulder elucidates Irigaray s thoughts on the relations between becoming woman and becoming divine She shows that Luce Irigaray s restaging of the relation between the sensible and the intelligible between flesh and Word is key to her reinterpretation of the relation between woman and God In and through her interpretation of Luce Irigaray s thoughts on the flesh she argues that the relation between flesh and Word must be seen as a dialectical one instead of as a dualistic relation This means that incarnation is no longer seen as a one way process of Word becoming flesh but as a continuing process of flesh becoming word and word becoming flesh For all images and thoughts including those of God are produced by the flesh divine in its creativity inexhaustibility in response to the touch of the other And these images thoughts words in turn become embodied by touching and moving the flesh of the subject Transactions of the Third International Congress for the History of Religions Percy Stafford Allen,John de Monins Johnson,1908

Method and scope of the history of religions** Percy Stafford Allen,John de Monins Johnson,1908 4D Visualization of Matter Ahmed H Zewail,2014-09-12 Ever since the beginning of mankind s efforts to pursue scientific inquiry into the laws of nature visualization of the very distant and the very small has been paramount The examples are numerous A century ago the atom appeared mysterious a raisin or plum pie of no structure until it was visualized on the appropriate length and time scales Similarly with telescopic observations a central dogma of the cosmos was changed and complexity yielded to simplicity of the heliocentric structure and motion in our solar

system For matter in over a century of developments major advances have been made to explore the inner microscopic structures and dynamics These advances have benefited many fields of endeavor but visualization was incomplete it was limited either to the 3D spatial structure or to the 1D temporal evolution However in systems with myriads of atoms 4D spatiotemporal visualization is essential for dissecting their complexity The biological world is rich with examples and many molecular diseases cannot be fully understood without such direct visualization as for example in the case of Alzheimer's and Parkinson's The same is true for phenomena in materials science chemistry and nanoscience This anthology is an account of the collected works that have emerged over the past decade from Caltech Through recent publications the volume provides overviews of the principles the electron based techniques and the applications made Thanks to advances in imaging principles and technology it is now possible with 4D electron microscopy to reach ten orders of magnitude improvement in time resolution while simultaneously conserving the atomic spatial resolution in visualization This is certainly a long way from Robert Hooke's microscopy which was recorded in his 1665 masterpiece *Micrographia*
