of leading contemporary academics. The volume encompasses 20 chapters written by authors from 16 countries and it presents diversified views on the understanding of logic from strict mathematical approaches to the informal argumentative ones and differentiated choices concerning the aspects of law making taken into account. The book presents a broad set of perspectives, insights and results into the emerging field of research devoted to the logical analysis of the area of creation of law. How does logic inform lawmaking? Are legal systems consistent and complete? How can legal rules be represented by means of formal calculi and visualization techniques? Does the structure of statutes or of legal systems resemble the structure of deductive systems? What are the logical relations between the basic concepts of jurisprudence that constitute the system of law? How are theories of legal interpretation relevant to the process of legislation? How might the statutory text be analysed by means of contemporary computer programs? These and other questions ranging from the theoretical to the immediately practical are addressed in this definitive collection. *Essays on the Visualisation of Legal Informatics* Vytautas Cyras, Friedrich Lachmayer, 2023-05-18. Both legal scholars and computer scientists will be curious to know how the gap between law and computing can be bridged. The law and also jurisprudence is based on language and is mainly textual. Every syntactic system has its semantic range and so does language which in law achieves a high degree of professional precision. The use of visualisations is a syntactic supplement and opens up a new understanding of legal forms. This understanding was reinforced by the paradigm shift from textual law to legal informatics in which visual formal notations are decisive. The authors have been dealing with visualisation approaches for a long time and summarise them here for discussion. In this book a multiphase transformation from the legal domain to computer code is explored. The authors consider law enforcement by computer. The target view is that legal machines are legal actors that are capable of triggering institutional facts. In the visualisation of statutory law an approach called Structural Legal Visualisation is presented. Specifically the visualisation of legal meaning is linked with tertium comparationis the third part of the comparison. In a legal documentation system representing one legal source with multiple documents is viewed as a granularity problem. The authors propose to supplement legislative documents *ex ante* with explicit logic oriented information in the form of a mini thesaurus. In contrast to so called strong relations such as synonymy, antonymy and hypernymy, hyponymy one should consider weak relations: 1. dialectical relations, a term of dialectical antithesis; 2. context relations and 3. metaphorical relations which means the use of metaphors for terms. The chapters trace topics such as the distinction between knowledge visualisation and knowledge representation, the visualisation of Hans Kelsen's Pure Theory of Law, the separation of law and legal science, legal subsumption, legal relations, legal machines, encapsulation, compliance, transparency, standard cases and hard cases.
