Building Construction Before Mechanization John Fitchen,1989-04-03

How were huge stones moved from quarries to the sites of Egyptian pyramids How did the cathedral builders of the Middle Ages lift blocks to great heights by muscle power alone In this intriguing book John Fitchen explains and illustrates the solutions to these and many other puzzles in preindustrial building construction This is the first general survey of the practices and role of the builder as opposed to the designer in constructing an array of structures Fitchen s approach gives a valuable hands on feel for what it s like to work with ropes and ladders wedges and slings with crews engaged in well digging bridge building and the transporting of obelisks hundreds of miles by water and over land The buildings discussed range from the tents tepees and igloos of nomadic tribes to the monumental pyramids of Egypt the temples of Greece the aqueducts of Rome and the cathedrals of medieval Europe
