This text provides the practising engineer with a review of the current techniques and applications of machine control The
control of machines is essential in the manufacturing process in order to produce products with more speed efficiency and
accuracy The range of machinery dependent upon control by a dedicated computer is very broad encompassing sheet metal

Workshop is an interdisciplinary computer science mathematics event It takes place once very fourth year and is aimed at
evaluating the latest progress in modeling techniques in the area of performance and reliability engineering of computer
communication systems Like its predecessor the workshop from which these papers originate aimed at stimulating the
exchange of ideas and experience among scientists active in mathematics research relevant to performance and reliability
aspects of the design of computer and communication systems The spirit of these exchanges and the main issues at stake are
defined by an unceasing and difficult quest for models and techniques which are in the interests of mathematical tractability
and accuracy and at the same time allow for enough realism so as to yield results which are pertinent to system designers
This was reflected in the present program which proposed a balanced and varied mixture of approximation techniques of
simulation methods and of analytical results on queueing matrix and Petri net models Byte ,1978 **Subject Guide to**
